IANA Stewardship Transition

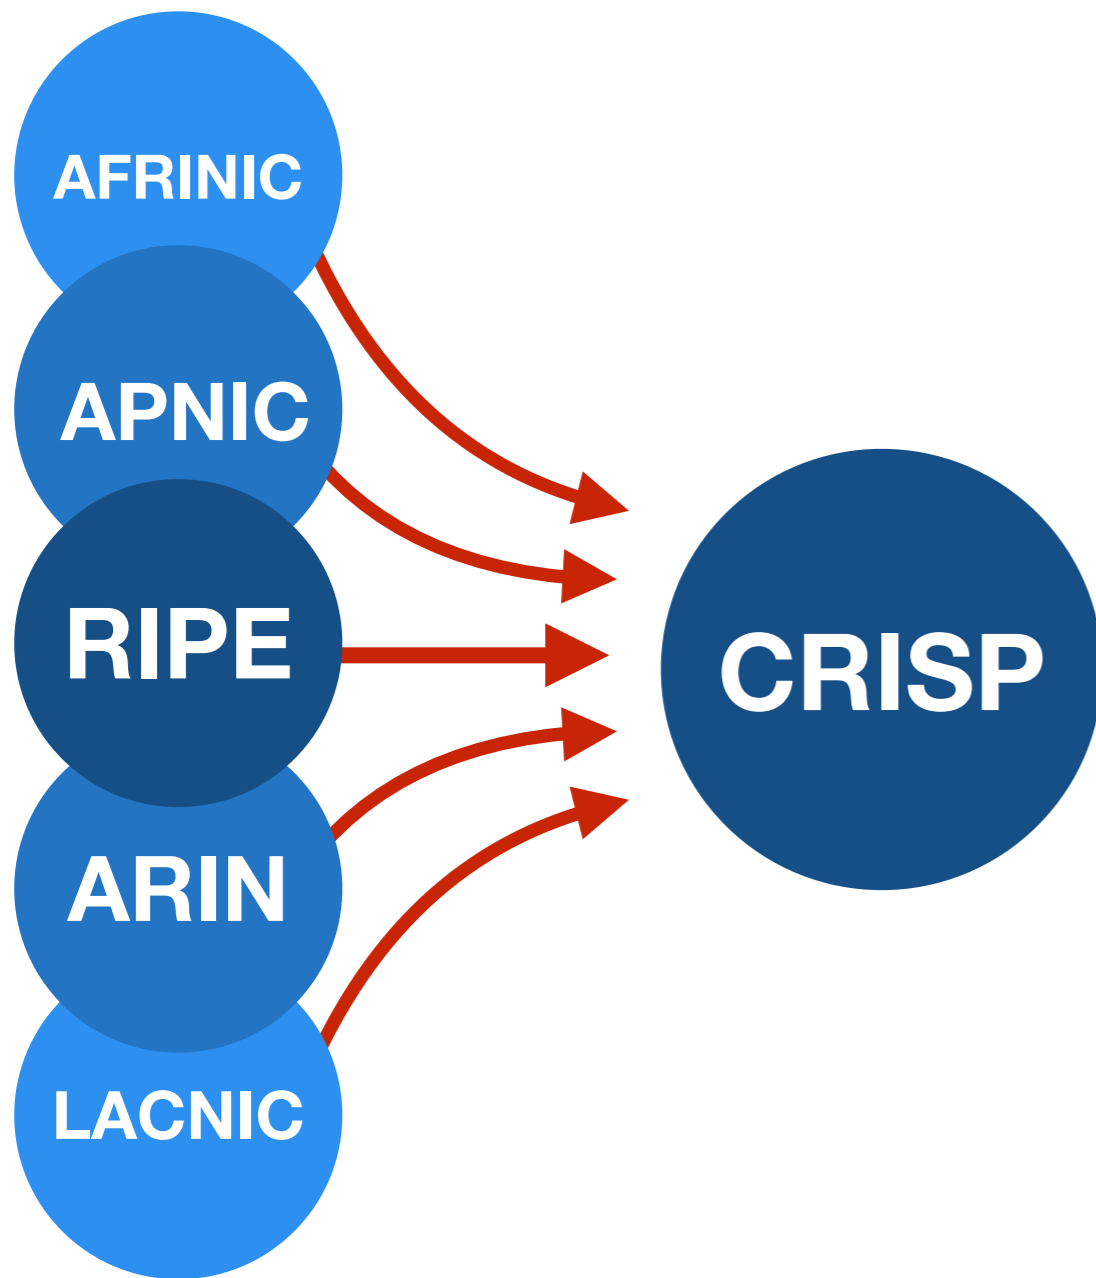

Paul Rendek & Chris Buckridge
RIPE NCC

1. IANA stewardship transition process
2. RIPE Community IANA Stewardship Principles
3. An RIR-IANA operator Service Level Agreement
4. Developments in other communities
5. ICANN accountability process
6. Open discussion

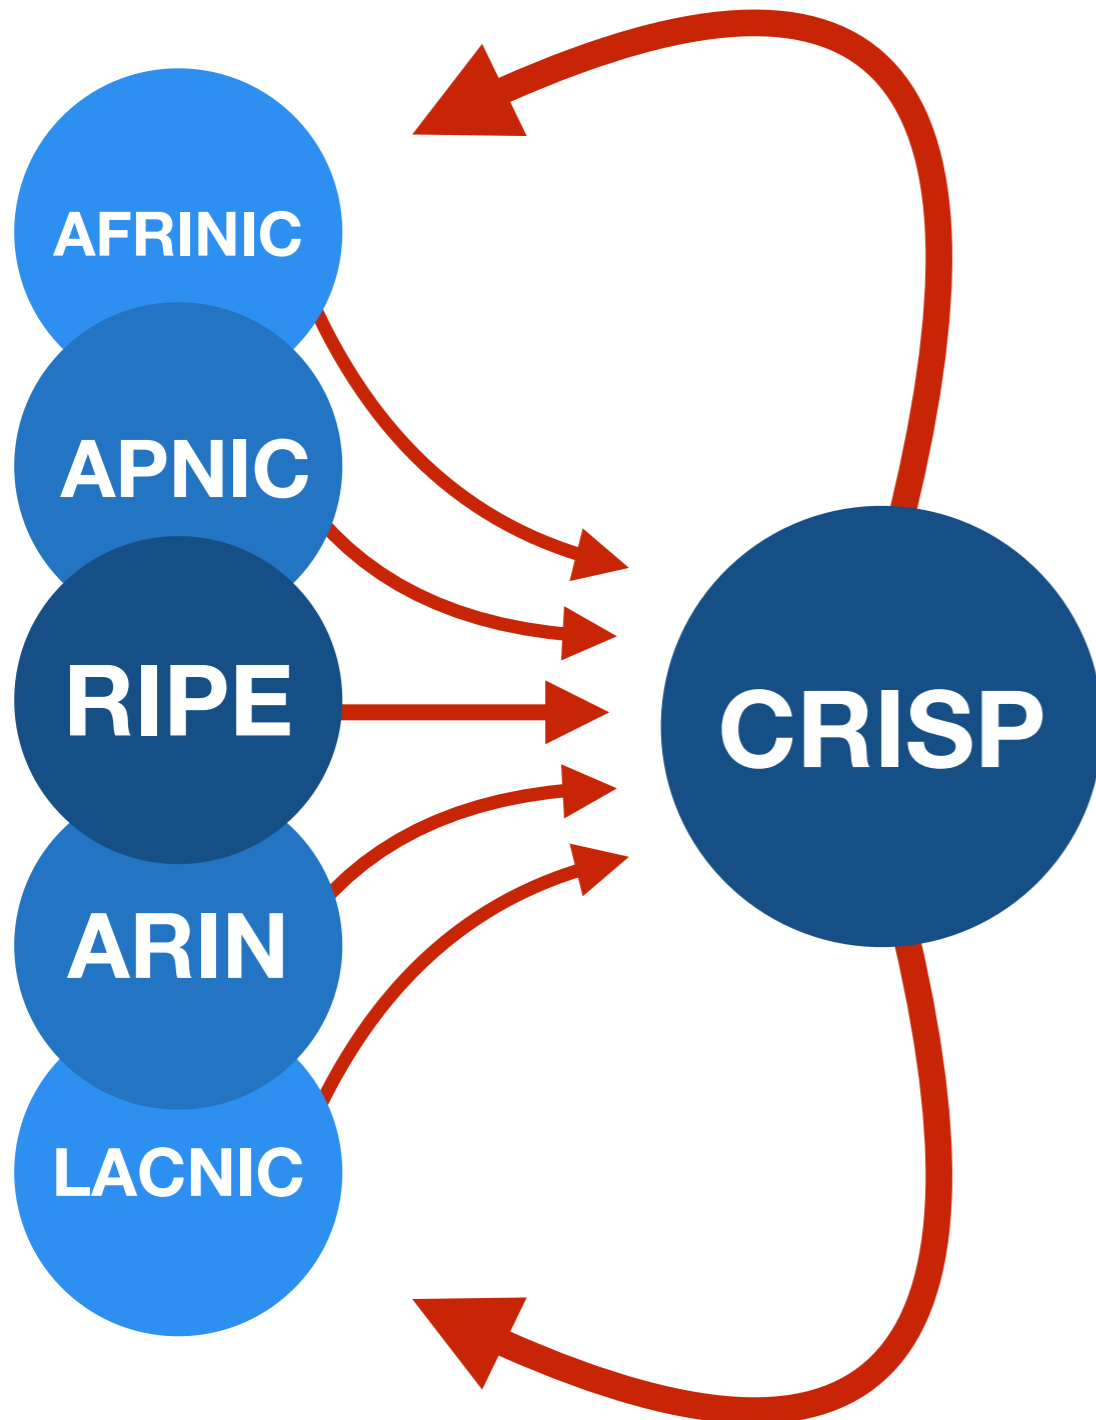

- March 2014: NTIA announced intention to transition away from oversight of the IANA functions
 - Including management of global IP address and AS Number pools
- A global, multistakeholder process is underway to develop a proposal for future IANA arrangements
- Work occurring in all of the affected communities
 - Numbers (RIRs)
 - Names (TLD communities, country code and generic)
 - Protocol parameters (IETF)

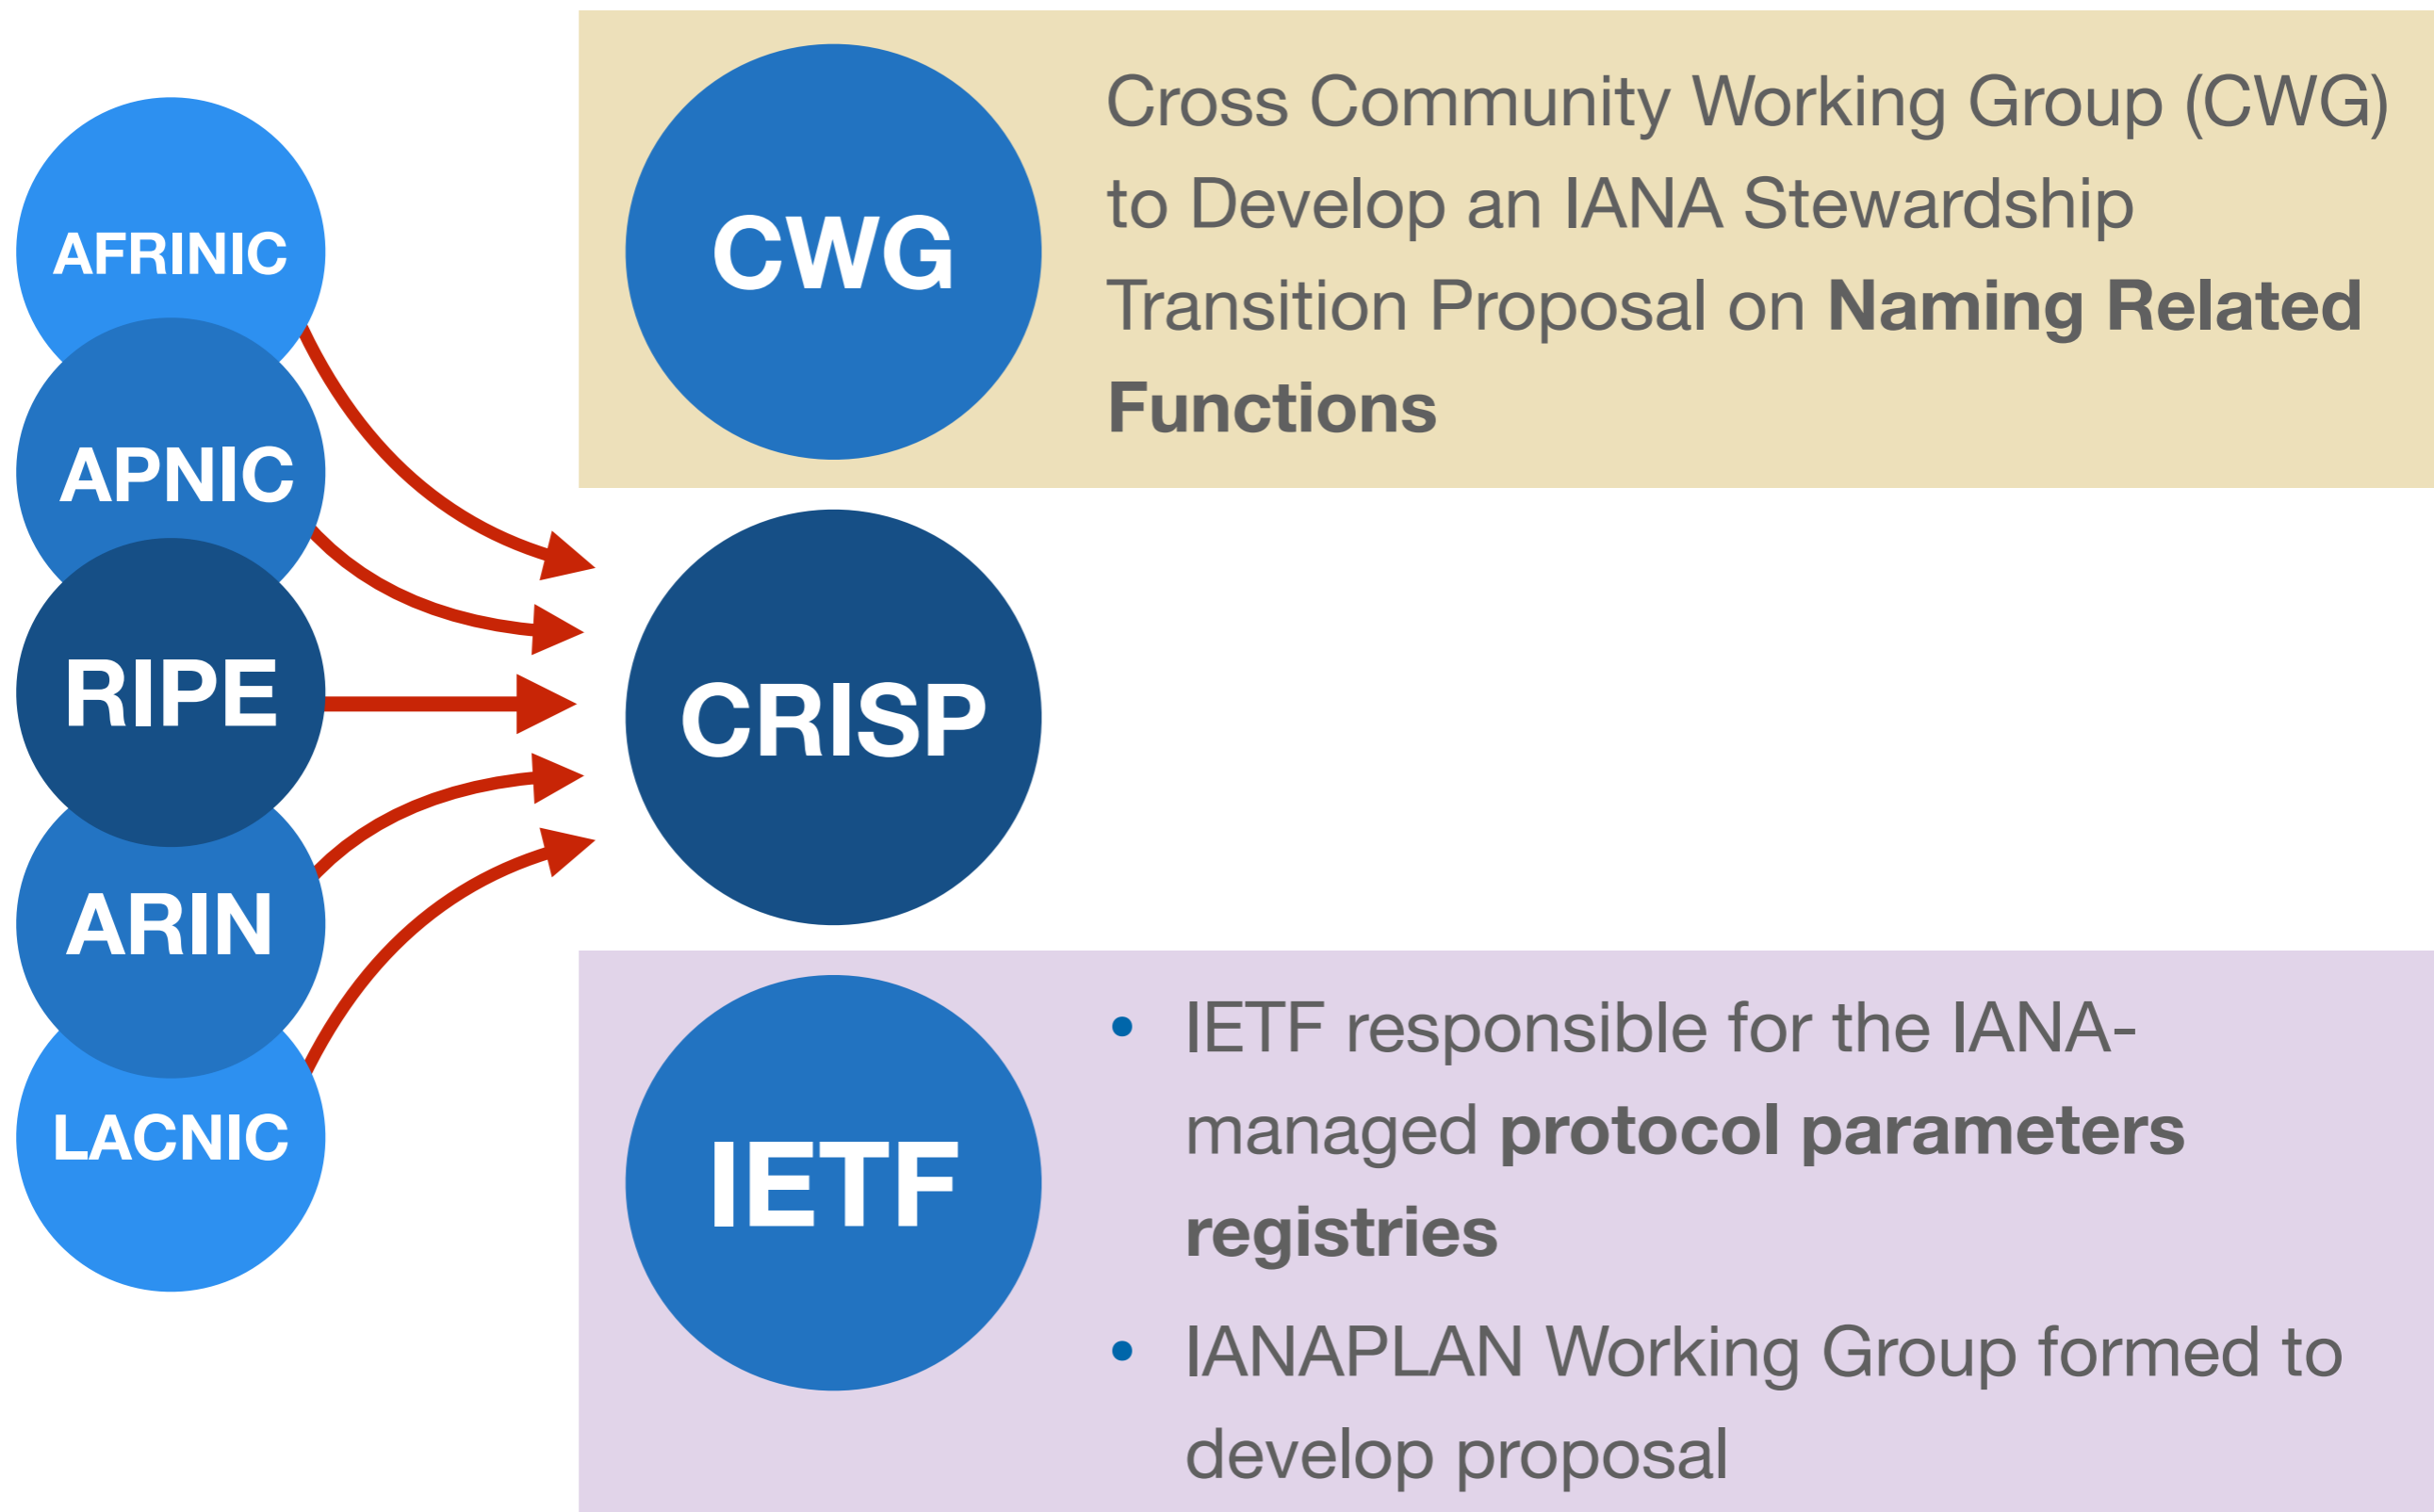

- Five RIR communities each holding their own discussions
- Output expected early December 2014
- <https://www.ripe.net/iana-discussions>
 - RIPE Cooperation WG mailing list archive
 - Summaries of other RIPE community discussions
 - Links to other RIR discussions
 - Links to global discussions (ICANN, IGF)

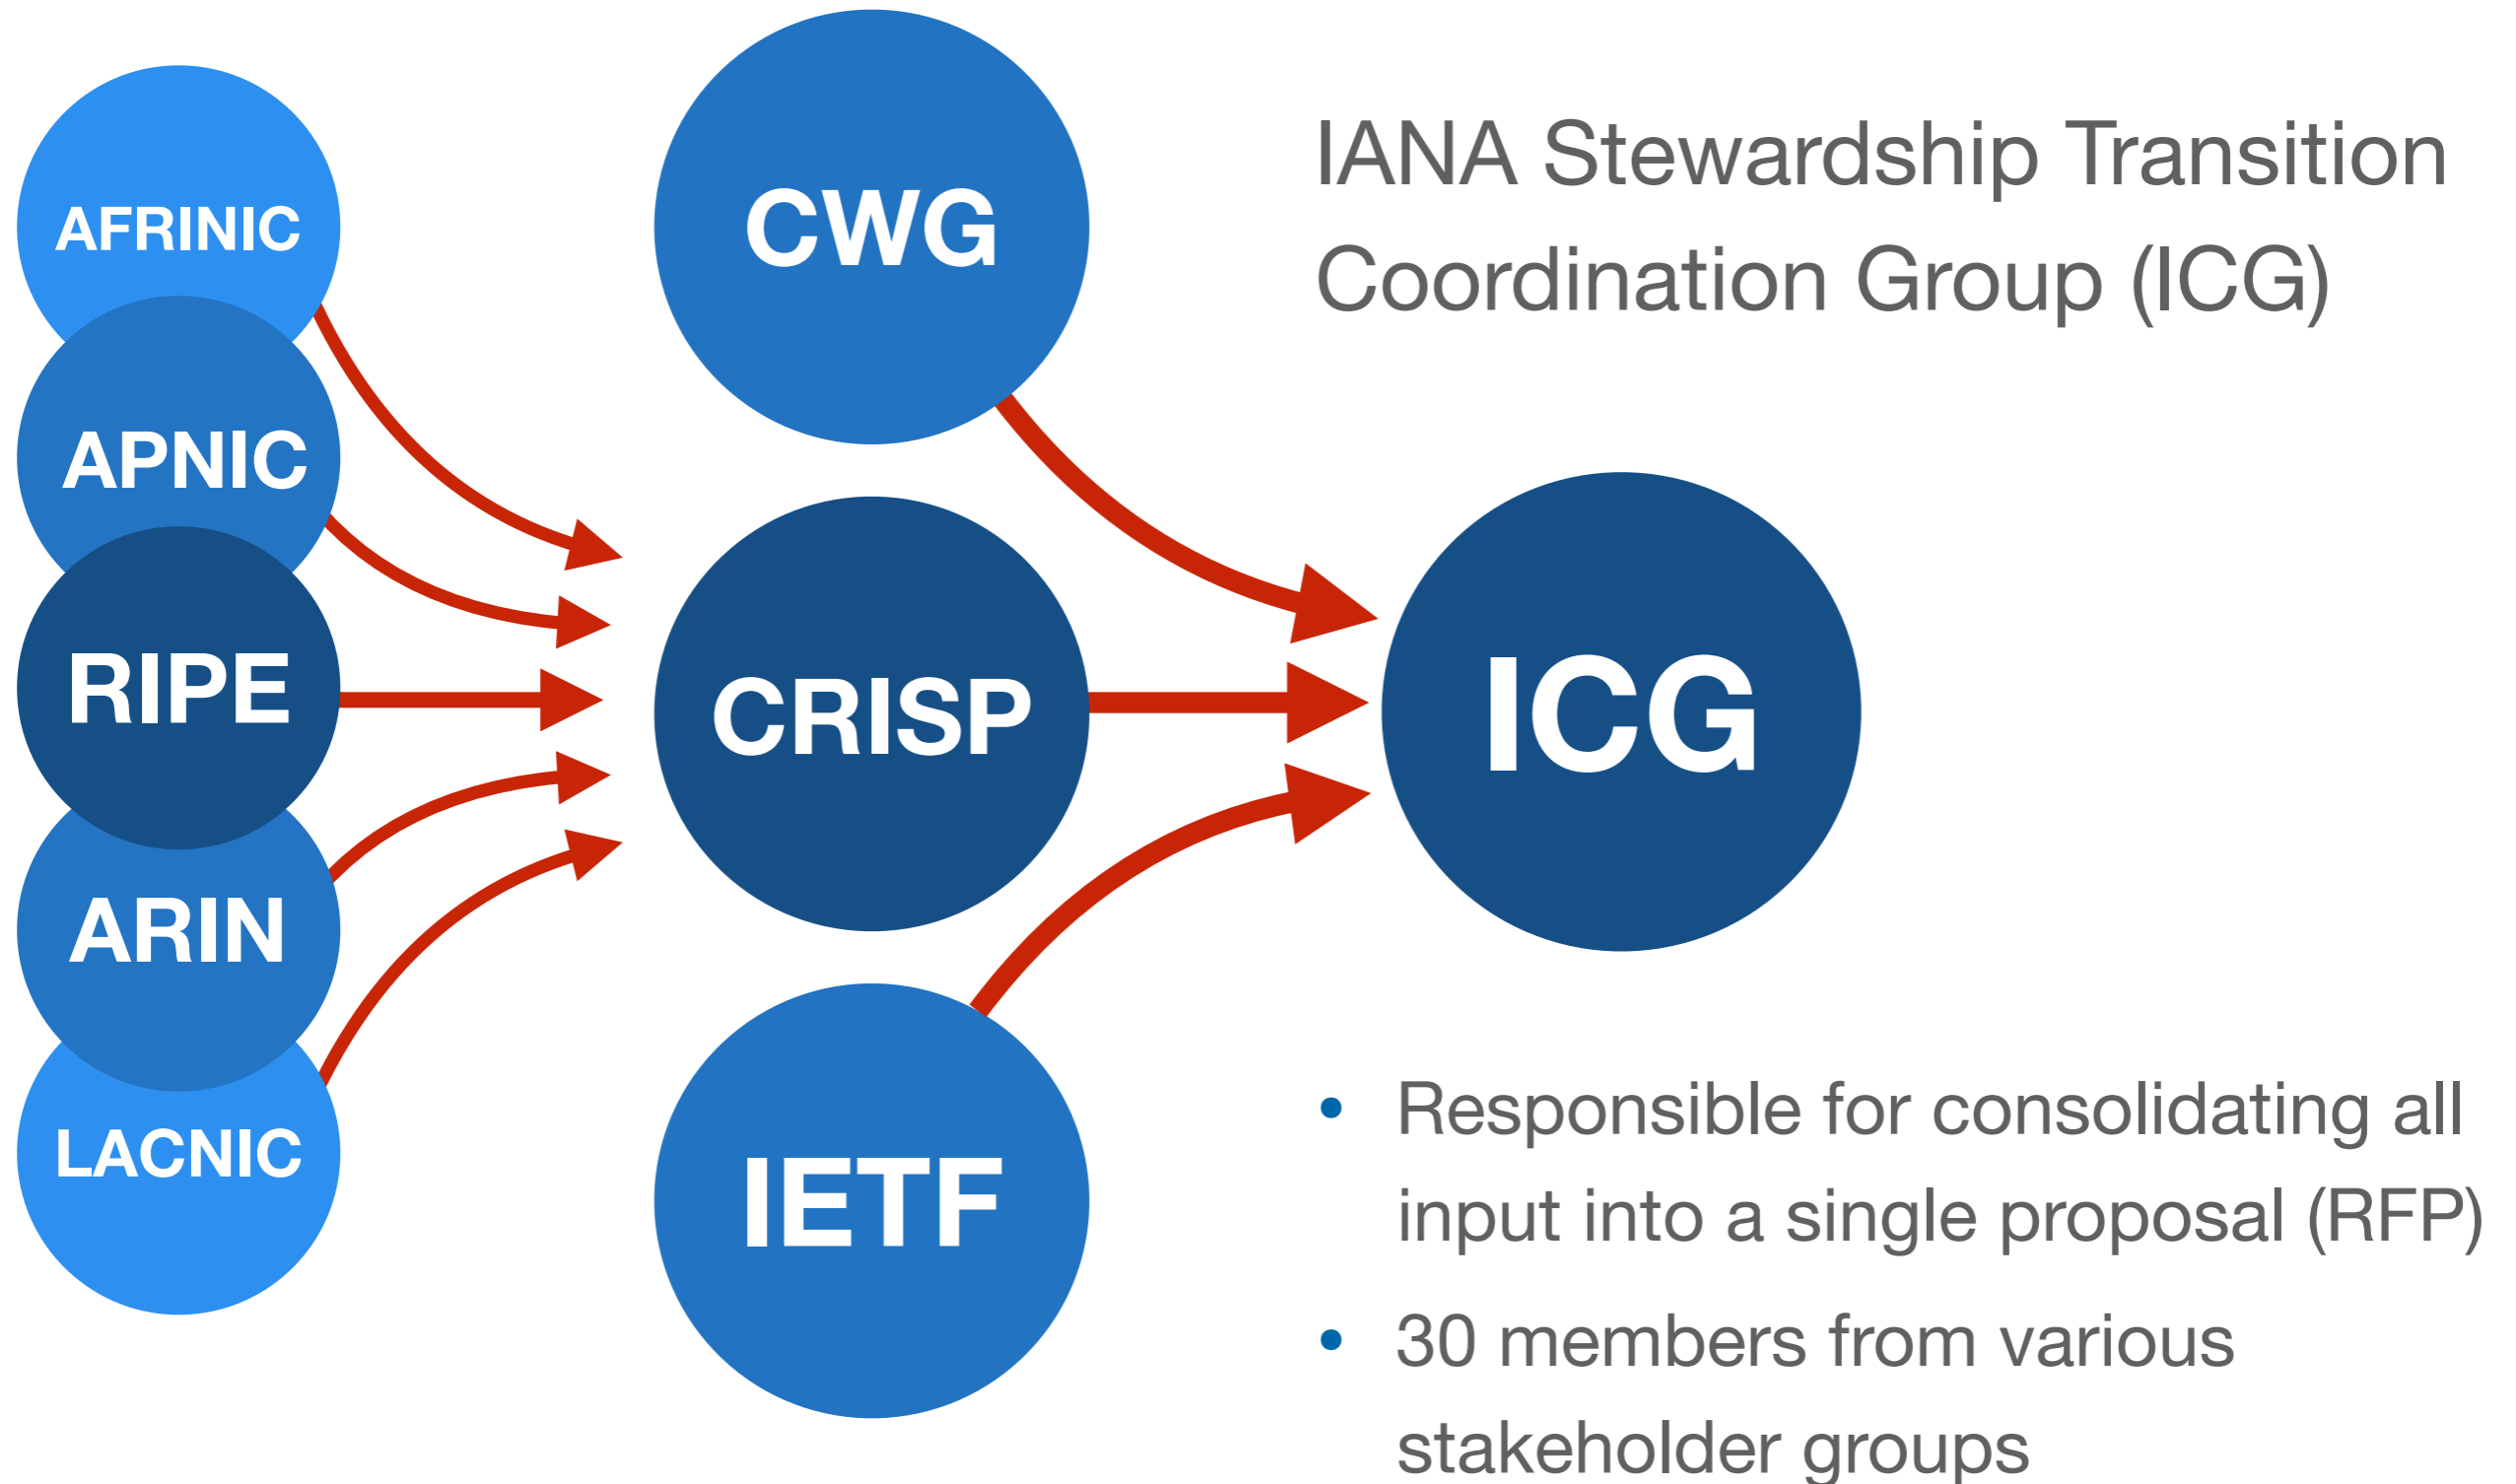

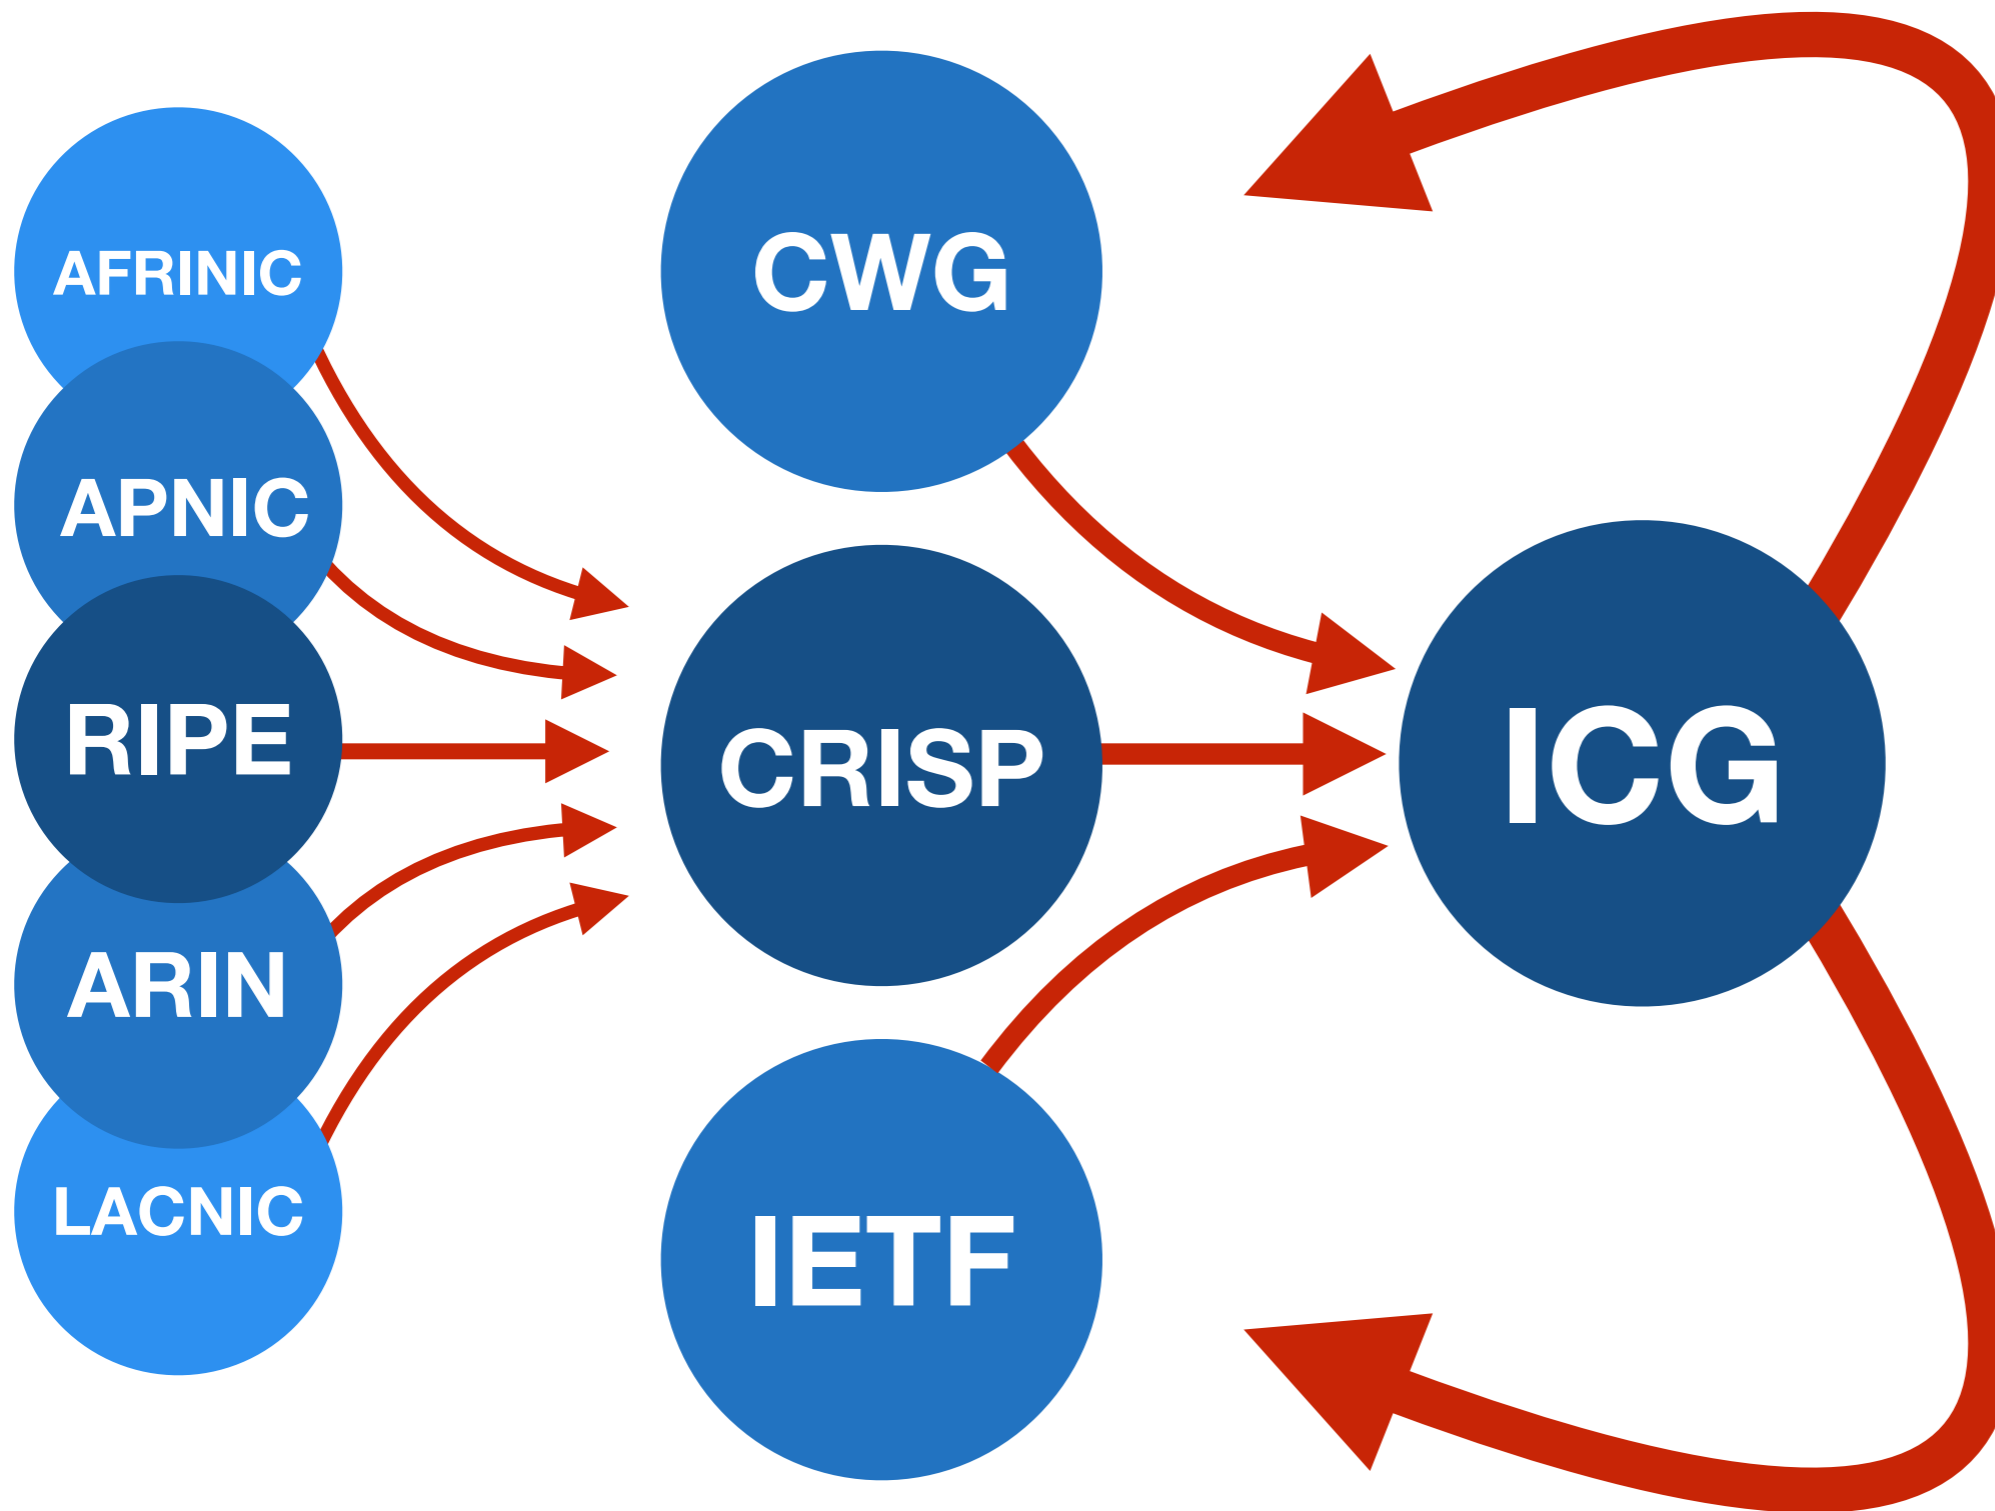

- Consolidated RIR IANA Stewardship Proposal (CRISP) Team
- Consolidate five RIR community outputs into a single proposal
- 15 members selected from communities and RIR staff

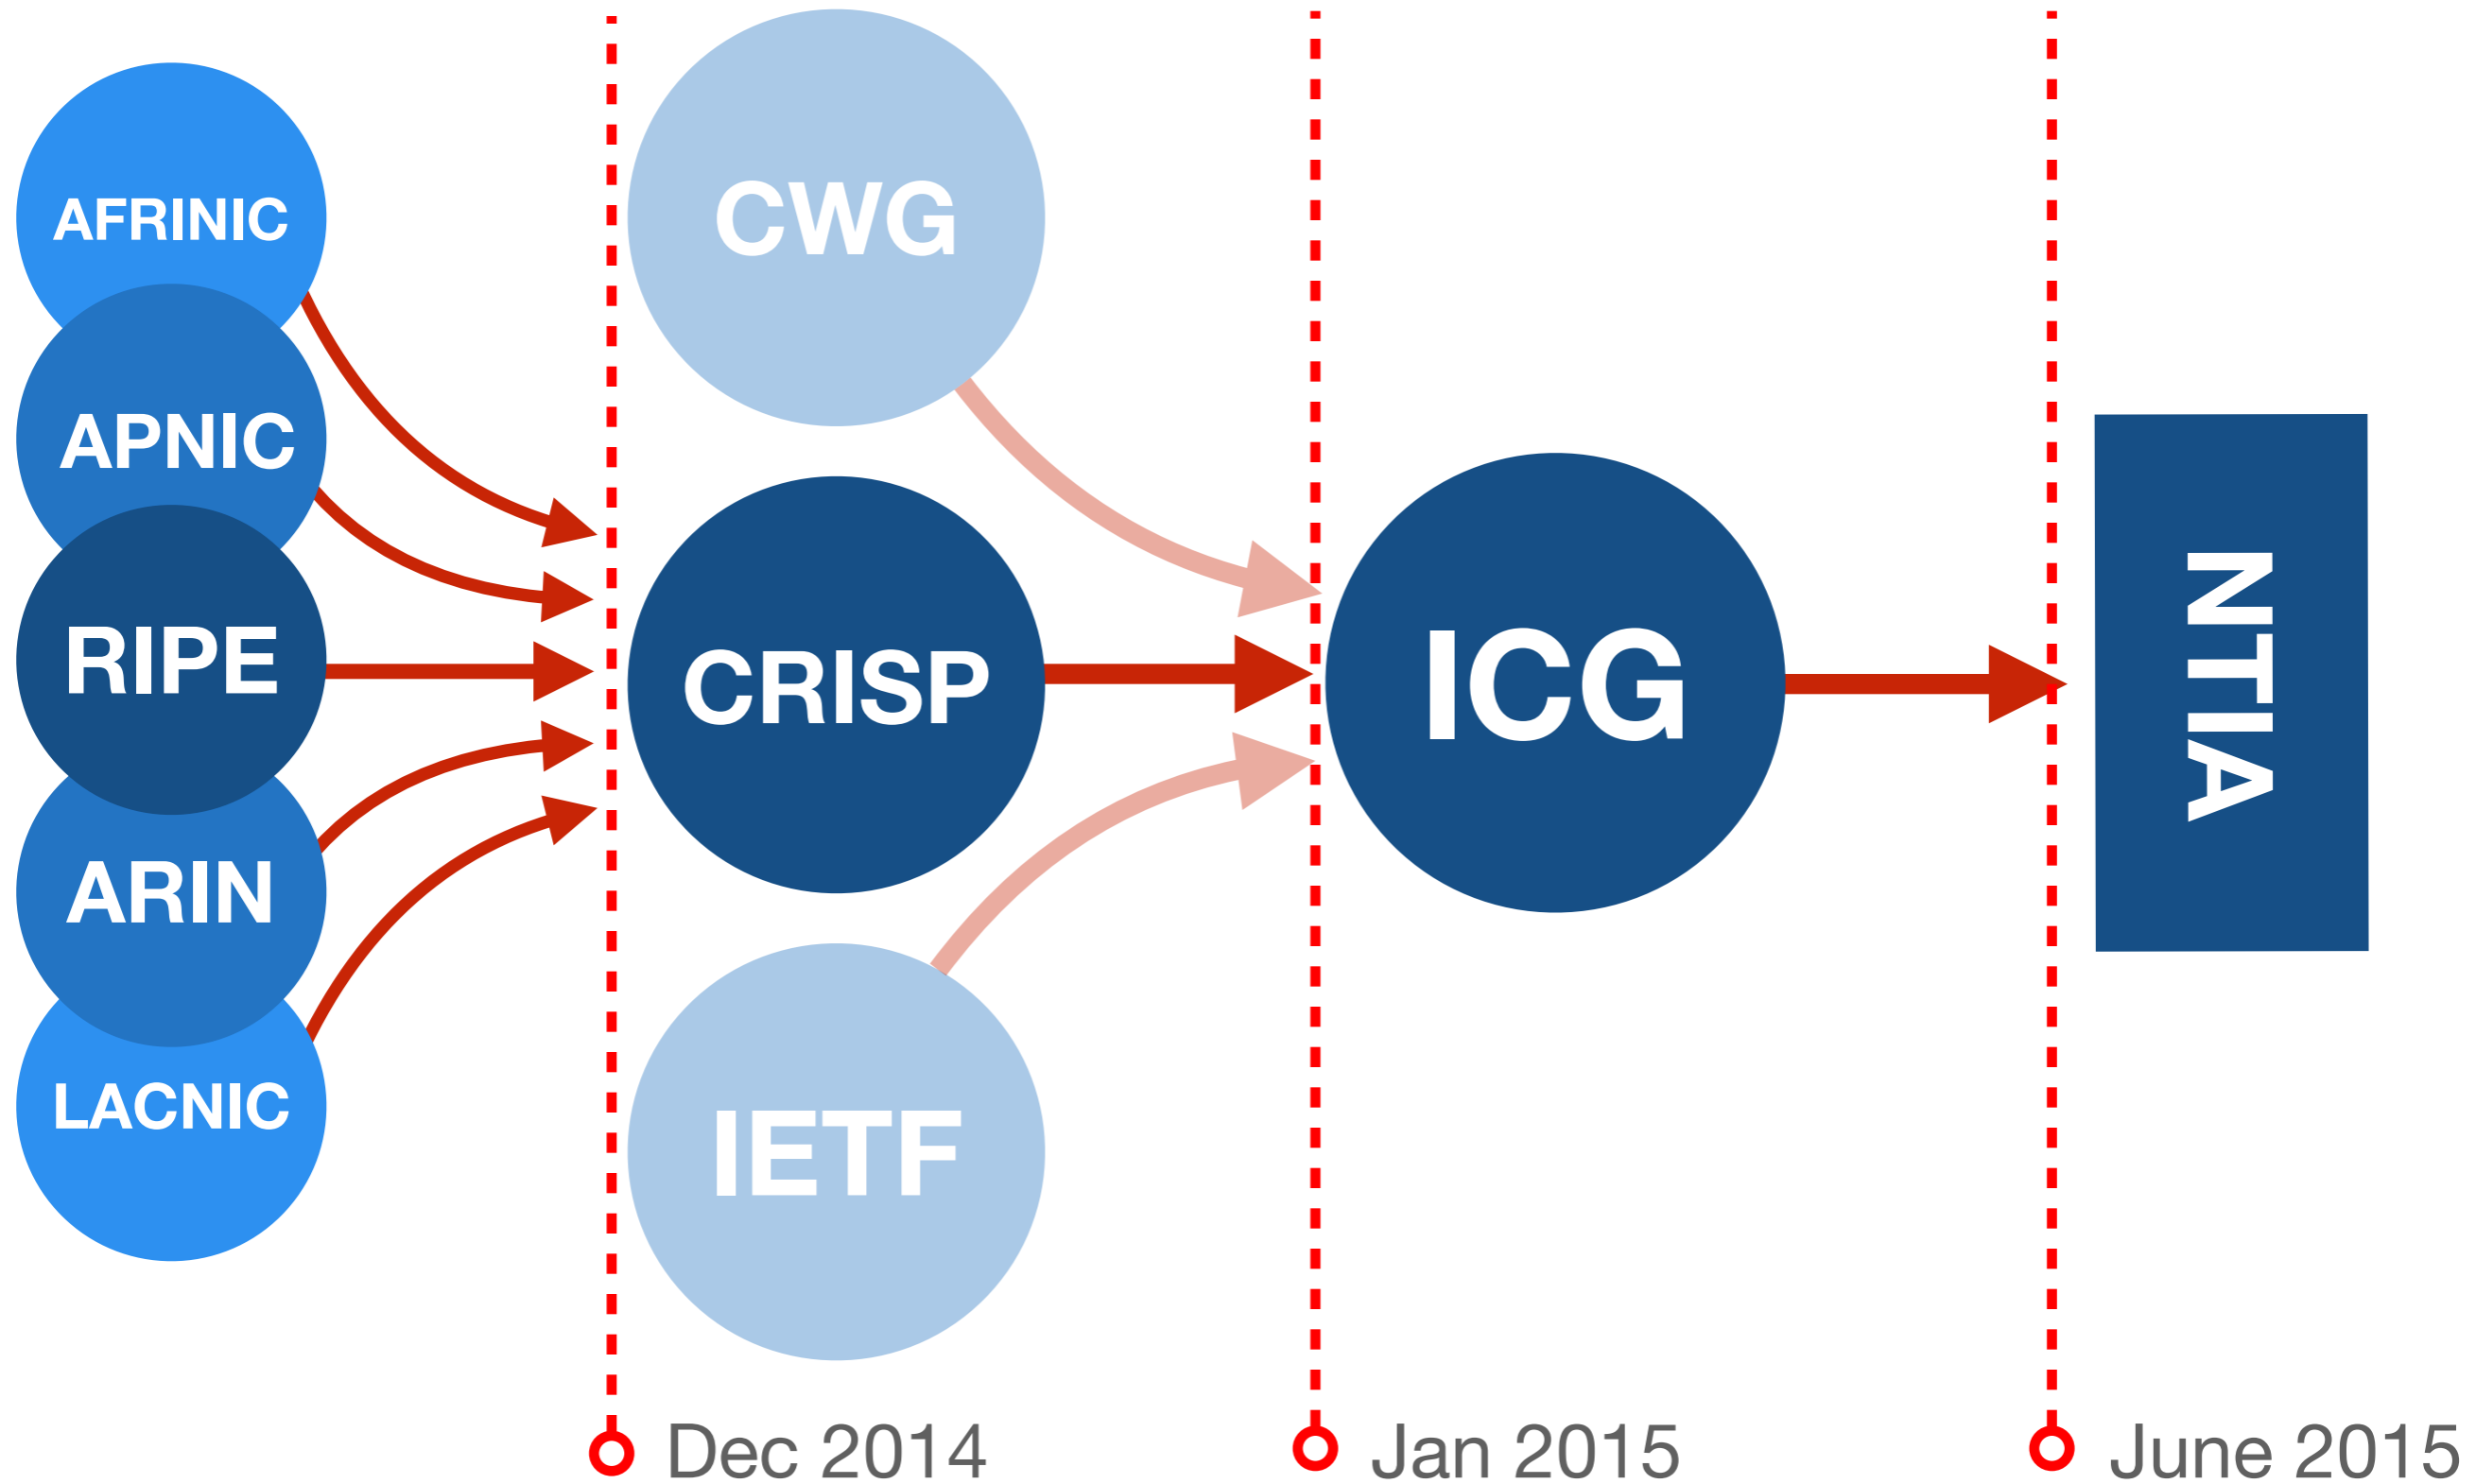

- Consolidated RIR IANA Stewardship Proposal (CRISP) Team
- Consolidate five RIR community outputs into a single proposal
- 15 members selected from communities and RIR staff
- Will work transparently via a public mailing list:
ianaxfer@nro.net

IANA Stewardship Process: Timeline

- All five regions currently seeking volunteers
 - Three per region
 - Two community members, one RIR staff member
- RIPE call for volunteers **NOW OPEN** (until end of this session)
 - RIPE Chair will select two community representatives
 - Announced in Friday plenary for community endorsement
- CRISP work timeline includes community feedback phase before submission to the ICG
- CRISP team will communicate to ICG if consensus cannot be achieved

- The RIPE community asks the RIPE NCC to work with the other RIRs to produce a common proposal for a legally binding agreement (such as a **Service Level Agreement**) between ICANN and the RIRs to replace the Internet number-related elements of the ICANN-NTIA agreement.
- This proposal should meet the requirements of the **Request For Proposals (RFP)** produced by the IANA Stewardship Transition Coordination Group (ICG).
- The proposal should bring the provisions of the agreement related to the services and service levels **up-to-date with current requirements** where necessary.

- This work should be coordinated with the **other users of the IANA function** as much as practical, with the aim of producing a proposed arrangement that is compatible with the proposed arrangements of the other IANA users.
- The RIPE community asks the RIPE NCC and the other RIRs keep it **informed about progress and content** of the proposal.
- The RIPE community asks the RIPE NCC to complete the proposal and to submit it to the ICG before 15 January 2015.

- The IANA operator will execute the global policies adopted according to the **global PDP** detailed in the ASO MoU
- Process, timelines, communication etc. for the distribution of resources
- **Specific obligations** on the IANA operator to perform the number-related IANA function as expected by the community
- Establish a **review mechanism** to ensure obligations are fulfilled
- **Consequences** if the IANA operator should fail to perform as agreed
- Define the **term of the contract** and the means by which either party may **terminate the contract**
- Define a process for **resolution of disputes** between the parties and the **jurisdiction** under which such resolution would take place

- APNIC

- Similar to RIPE draft, but includes establishment of new MoU between ICANN and the NRO

- LACNIC

- Similar to APNIC proposal, but establishes a Multistakeholder Oversight Numbers Council (MONC)
- Would provide annual review and evaluation of the IANA numbers function performed by ICANN

- ARIN

- Recently conducted survey, results online
- Currently appointing community CRISP team representatives
- CRISP team reps will guide community discussion
