

RIPE
NCC

Workshop: Advanced Topics in RIPE Atlas Usage

RIPE 69 - London - November 2014

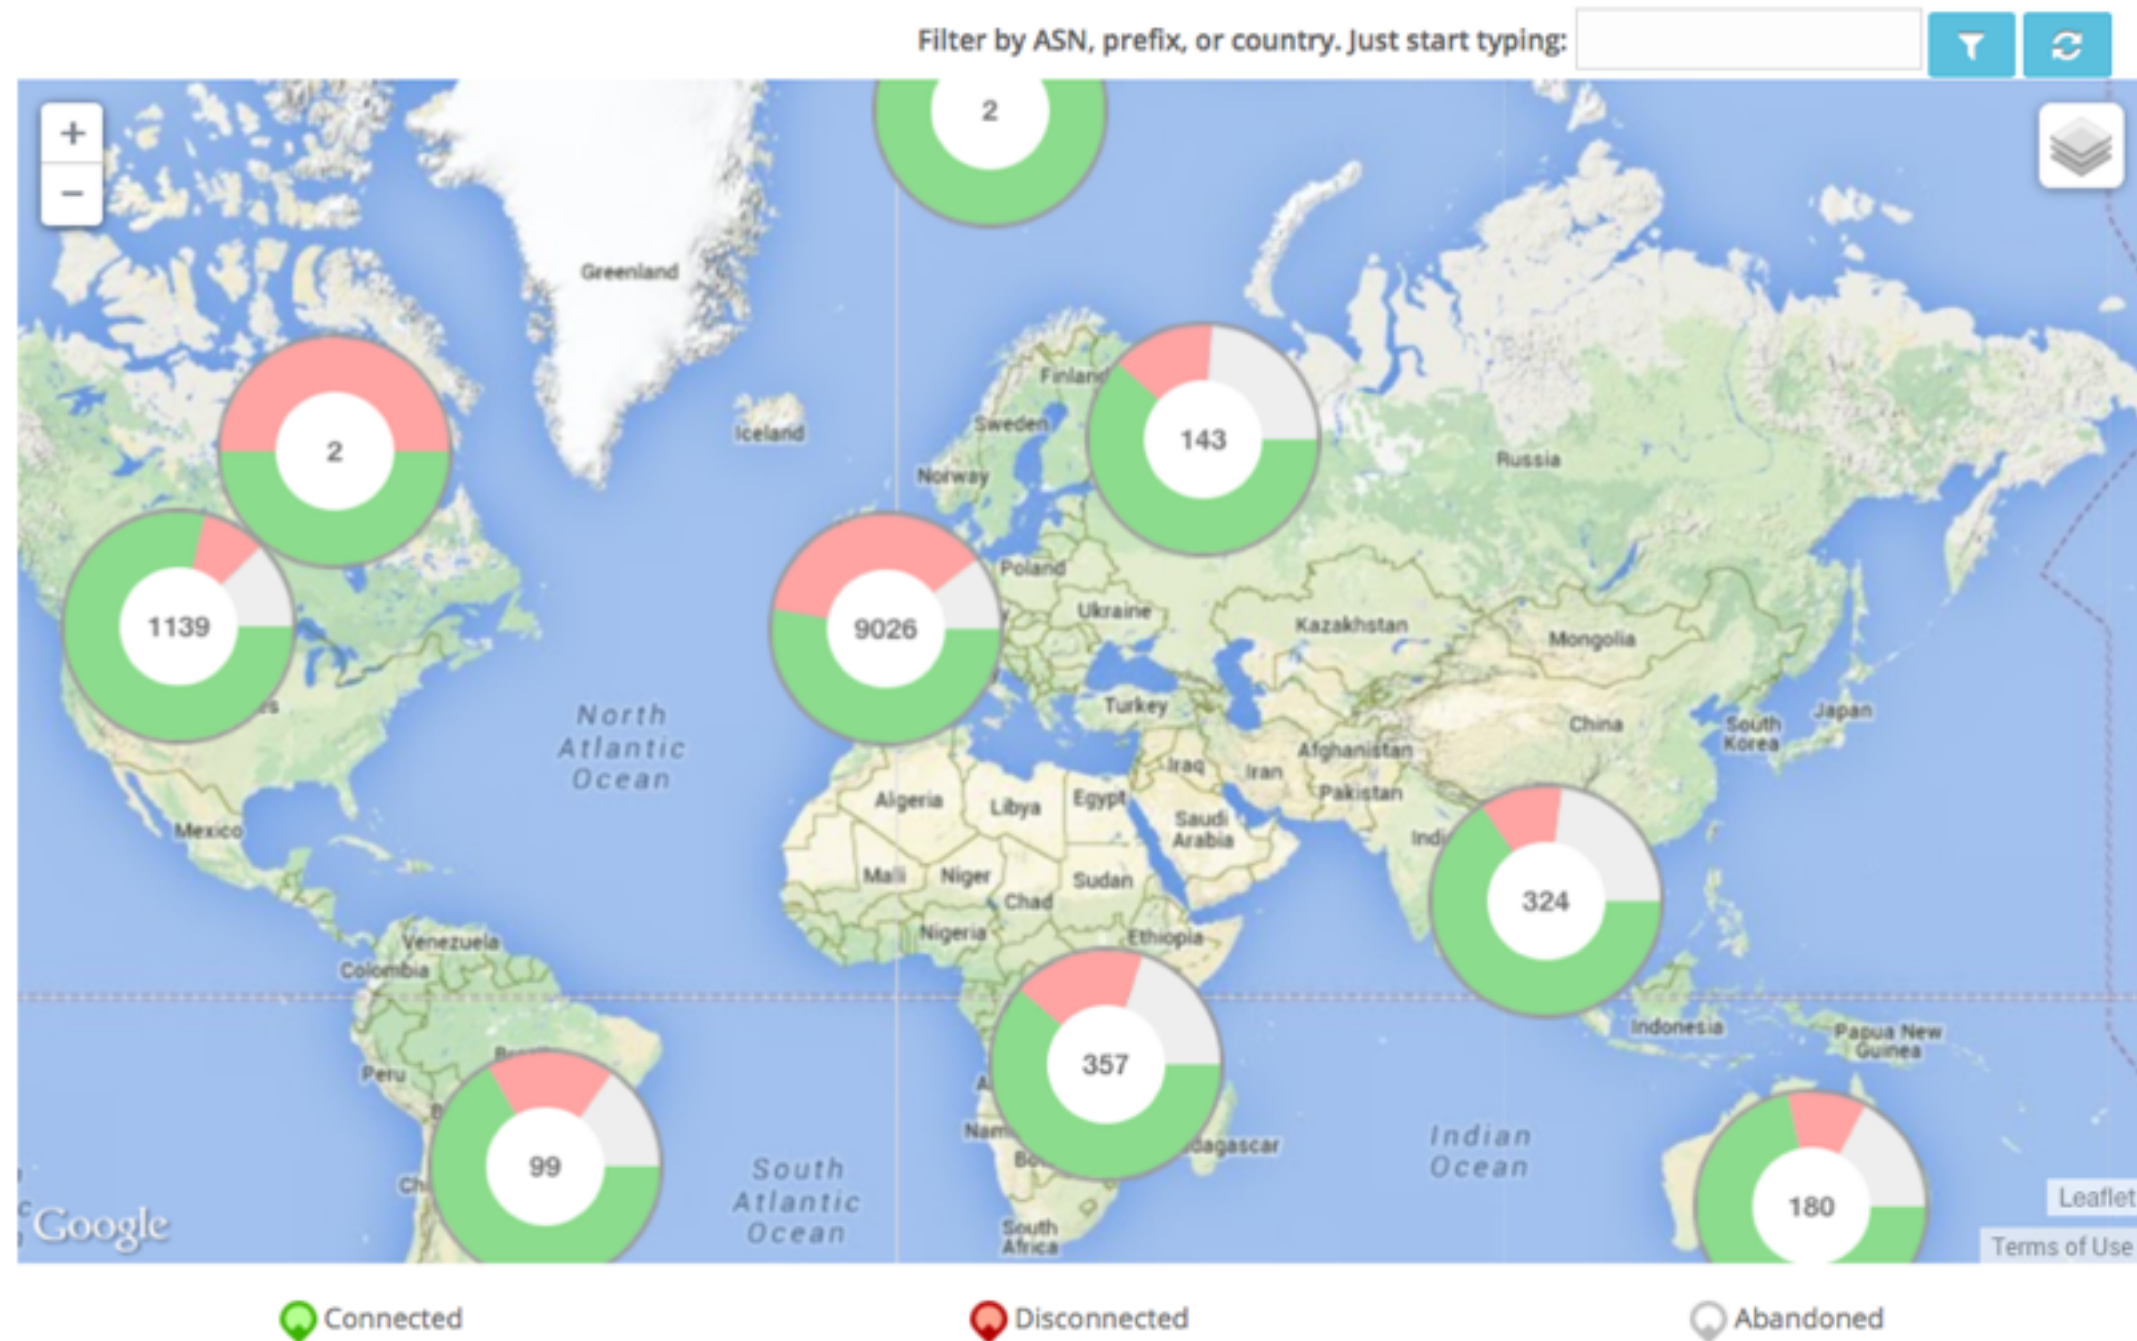

- Introduction to RIPE Atlas
- Finding public measurements
 - Exercise: Analyse results
- Creating a measurement
 - Exercise: Create a measurement using API
- Network monitoring
 - Exercise: Setting up 'Status Checks'
- More RIPE Atlas features
- Advanced topics
- Use cases and success stories
- RIPE Atlas anchors
- RIPE Atlas community

- We assume that you have already used RIPE Atlas
 - You have a RIPE NCC Access account
 - You have credits to spend
- Basics covered elsewhere:
 - <http://www.ripe.net/lir-services/training/courses/tailor-made-workshops/#tools>
 - <https://ripe69.ripe.net/programme/meeting-plan/tutorials/>
- Please let us know if these assumptions are not true!

- **RIPE Atlas = global active measurements platform**
- **Goal: View Internet reachability**
- **Probes hosted by volunteers**
- **Measurements performed towards root name servers**
 - Visualised as Internet traffic maps
- **Users can also run customised measurements**
 - ping, traceroute, DNS and SSL
- **Data publicly available**

Global RIPE Atlas Network Coverage

This map shows the locations of all RIPE Atlas probes, including those that are connected, disconnected and abandoned (meaning they have not been connected for a long period of time).

- v1 & v2: Lantronix XPort Pro
- v3: TP-Link TL-MR3020 powered from USB port
 - Does not work as a wireless router
 - Same functionality as the old probe
- RIPE Atlas anchor: Soekris net6501-70

- 7,100+ probes connected
- 3,000+ active users this year
- 1,000+ built-in measurements daily
- 5,000+ user-defined measurements daily
 - Available to hosts and members
 - ping, traceroute, DNS, SSL
- Goal by end 2014:
 - 10000 connected probes

Country	Probes
United States	848
Germany	778
France	686
United Kingdom	534
Russia	414
Nederland	409
Czech Republic	195
Ukraine	185
Belgium	174
Switzerland	170

- <https://atlas.ripe.net>
- Users mailing list: ripe-atlas@ripe.net
- Articles & updates on RIPE Labs:
<https://labs.ripe.net/atlas>
- Questions and bugs: atlas@ripe.net
- Twitter: [@RIPE_Atlas](https://twitter.com/RIPE_Atlas) and [#RIPEAtlas](https://twitter.com/hashtag/RIPEAtlas)

Finding Results of Public Measurements

RIPE
NCC

- **Create an RIPE NCC Access account**
 - The same account used for the LIR Portal, RIPE Atlas, RIPEstat, RIPE Labs...
- **Advanced**
- **‘LIR contact’: additional benefits!**
 - Membership benefits for RIPE Atlas
 - Share probe management with LIR colleagues
 - Historical RIPE Database view in RIPEstat
- **Add yourself as ‘contact’ in LIR Portal**

- Click on msm, then “Download”

- Or go to URL
- Or use the API

- Results in JSON

- Libraries for parsing on gitHub

You are here: [Home](#) > [Data & Tools](#) > [RIPE Atlas](#) > [Measurements](#) > [Measurement #1733329](#)

 **www.seil.jp** BETA

[General Information](#) [Probes](#) [Map](#) [OpenIPMap Prototype](#) [Download Results](#)

Download the raw measurement result data here.

You can use this form to download the data through your browser, or use the preview on the right to help you

Search Measurements by Target in RIPEstat

12

Go to “RIPEstat >
“RIPE Atlas Activity”

RIPEstat — Internet Measurements and Analysis

https://stat.ripe.net/widget/atlas-targets#w.resource=8.8.8.8

You are here: Home > Data & Tools > RIPEstat > atlas-targets

RIPE Atlas Measurement Targets (8.8.8.8)

8.8.8.8

Show 10 targets/page Search:

Measurement ID	Stopped	Type	Target IP	Target Hostname
1040720 	ongoing	ping	8.8.8.8	google-public-dns-a.google.com
1006491 	ongoing	traceroute	8.8.8.8	not specified
1006192 	ongoing	ping	8.8.8.8	not specified
1004827 	ongoing	traceroute	8.8.8.8	not specified
1002630 	ongoing	ping	8.8.8.8	not specified
1478085 	2014-02-24 13:41 UTC	dns	8.8.8.5	not specified

- **There are many measurements already running!**
- **Search for existing public measurements first**
- **Schedule your own measurement if you don't find what you're looking for**

- <https://atlas.ripe.net/docs/measurement-latest-api/>
 - Widget monitoring value in real time (100 probes pinging websites worldwide)
 - Alert based on average measurements per hour
 - Big network event, e.g. Internet outage in a region
 - DNS domain monitoring; configurable measurements using 10 RIPE Atlas anchors
- https://labs.ripe.net/Members/suzanne_taylor_muzzin/ripe-atlas-latest-results-api-and-parsing-library

Exercise: Analyse Measurements Results

RIPE
NCC

- Get the msm-ID 1004005 (ping IPv6)
 - Measurement data from 2014-09-09 to 2014-09-11
 - <https://atlas.ripe.net/api/v1/measurement/1004005/result/?start=1410220800&stop=1410479999>
- Find out how many times RTT was above 60ms
 - Either by using Python or Javascript
 - For the Javascript solution, you can use this as a starting point:
 - https://stat.ripe.net/widgets/demo/script_me.html

Creating a Measurement

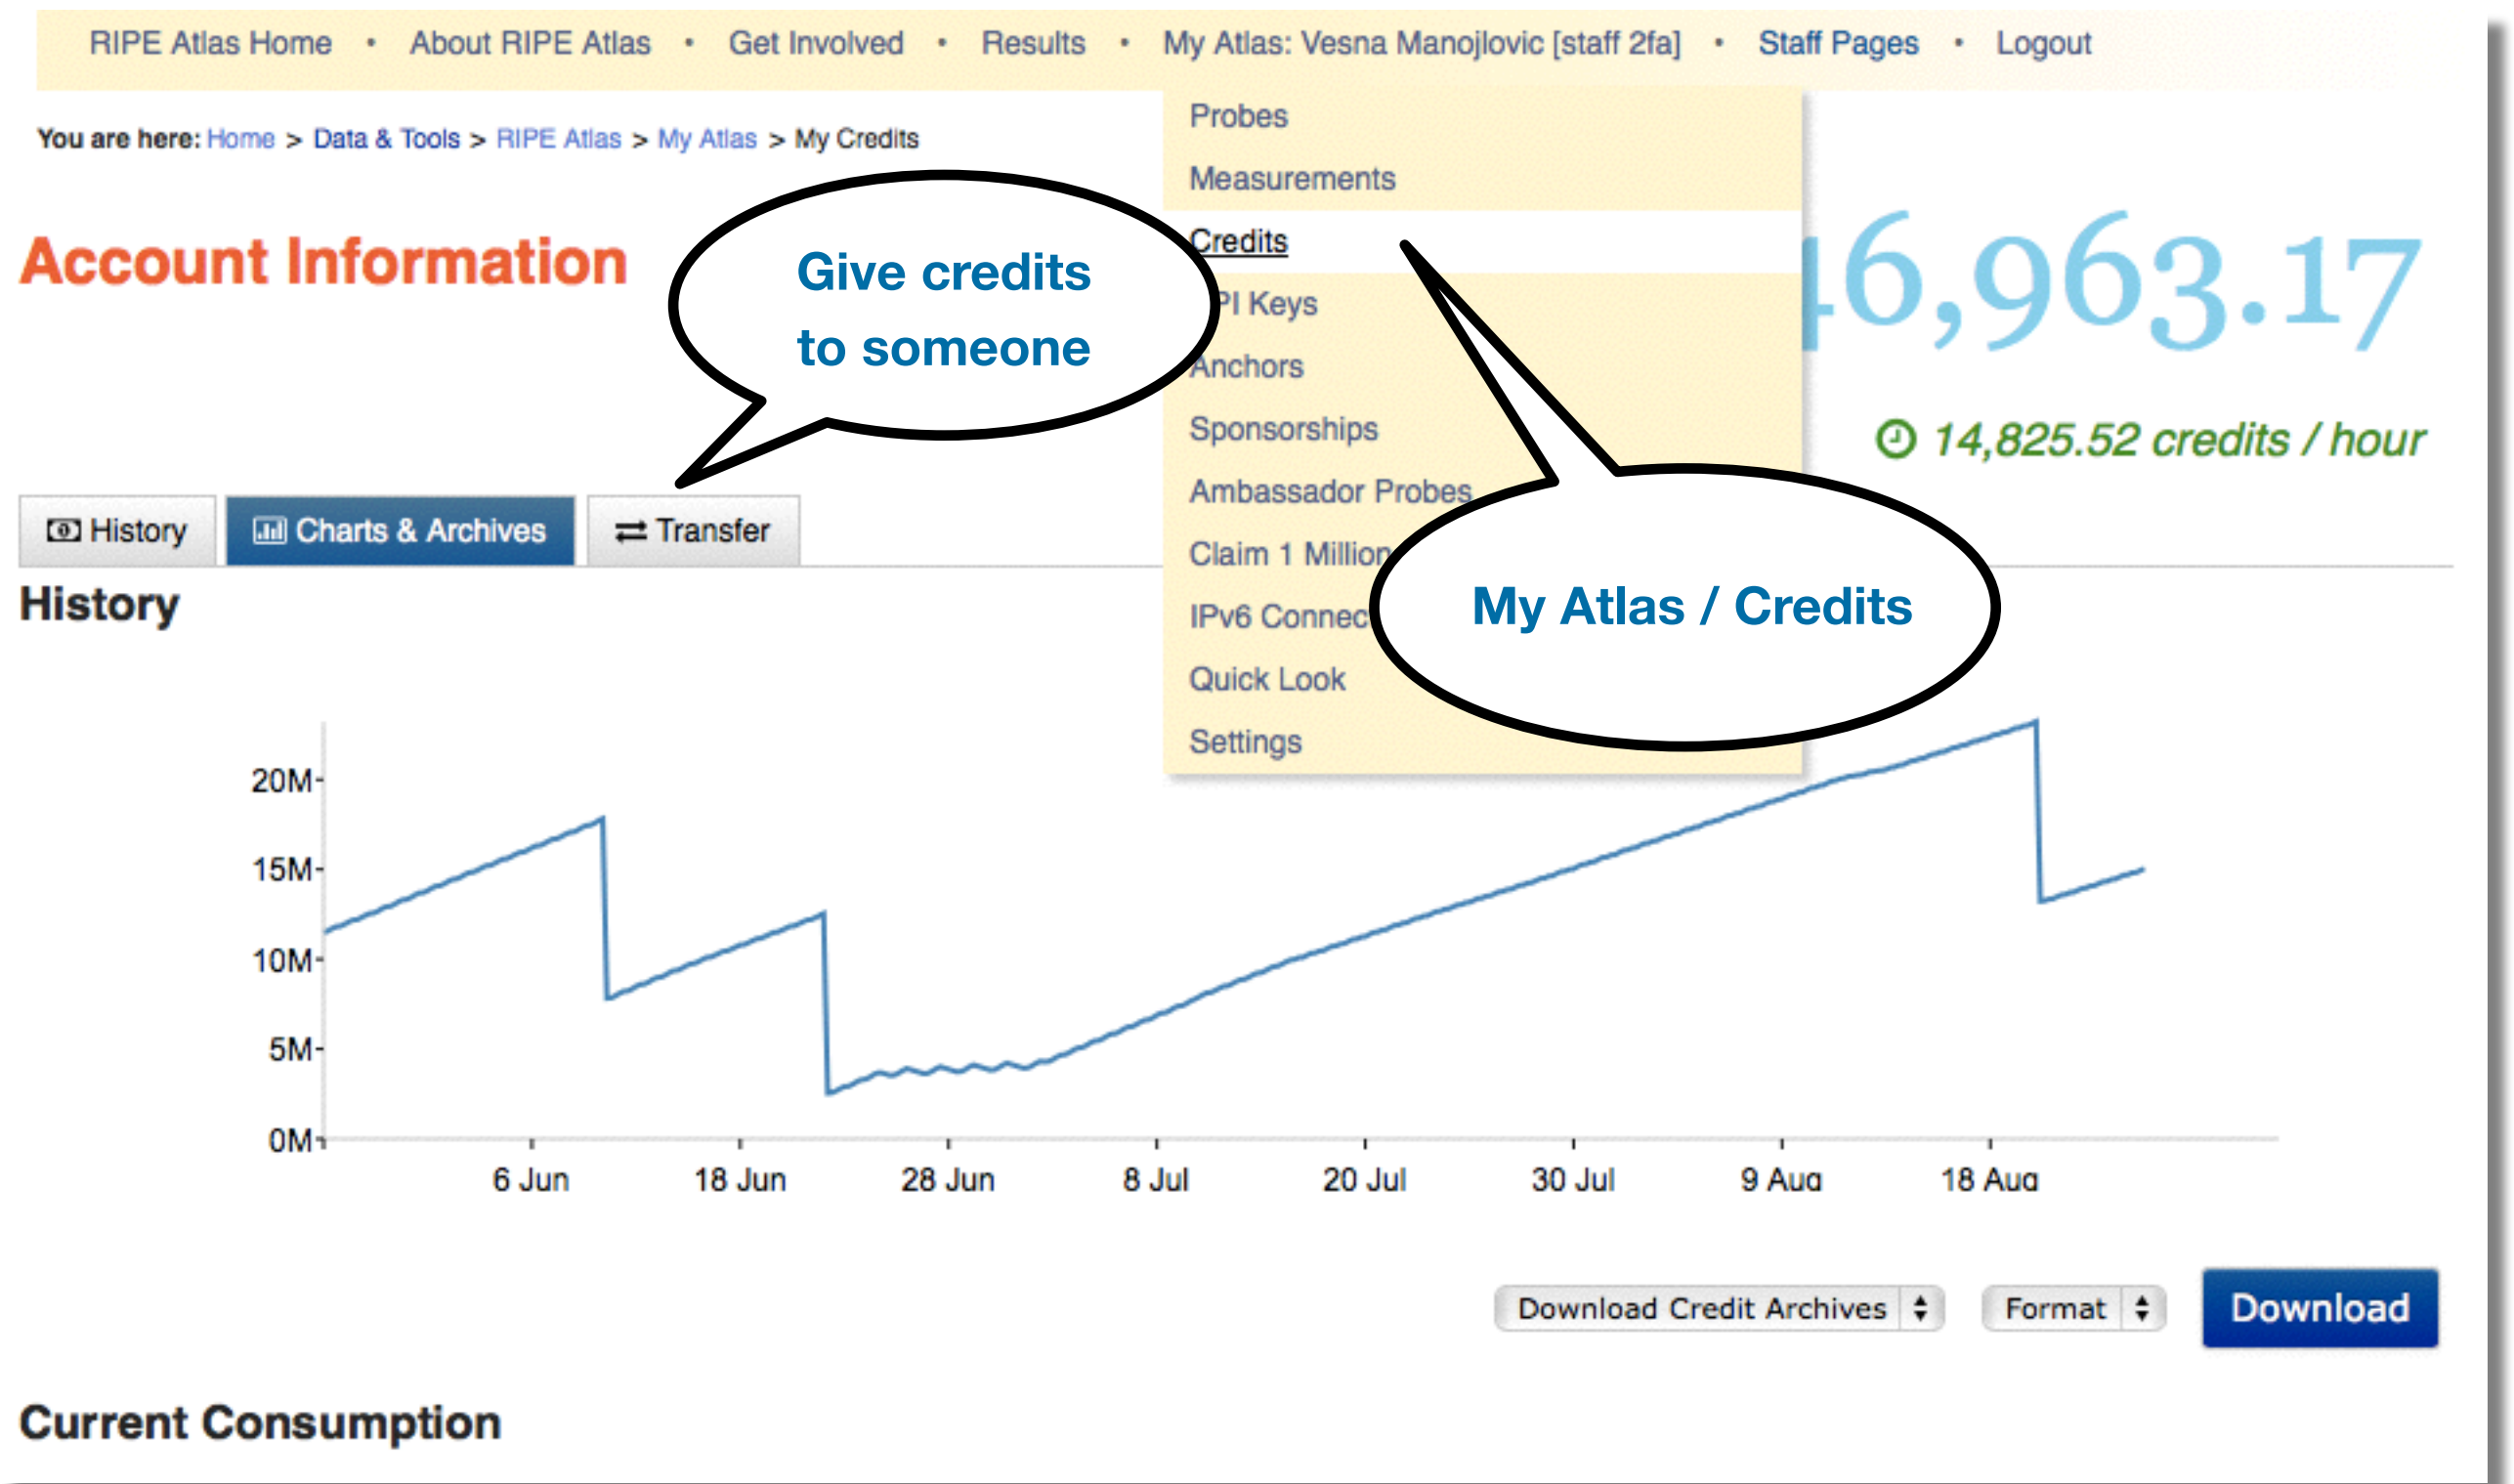

RIPE
NCC

- Log in to atlas.ripe.net
- “My Atlas” > “Measurements”
- “New Measurement” or “One-off”
 - Most are periodic and last a long time
 - Choose type, target, frequency, # of probes, region...
 - You will spend credits
- <https://atlas.ripe.net/doc/udm>

- You will need API keys
 - To create measurements without logging in
 - Also: to securely share your measurement data
- To create, manage and delete API keys:
 - <https://atlas.ripe.net/keys/>
 - <https://atlas.ripe.net/docs/keys2/>
- Examples:
 - <https://atlas.ripe.net/docs/rest/>
- API Documentation
 - <https://atlas.ripe.net/docs/measurement-creation-api/>

- **Measurements cost credits**
 - ping = 10 credits, traceroute = 20, etc.
- **Why? Fairness and to avoid overload**
- **Hosting a probe earns credits**
- **Earn extra credits by:**
 - Being a member
 - Hosting an anchor
 - Sponsoring probes

<https://atlas.ripe.net/doc/credits>

Exercise: **Create a Measurement**

RIPE
NCC

- **Create a measurement**
 - Ping
 - Involving ten probes
 - To a target of your choice.
 - Source: your country
 - Duration: two days

- **Use the RIPE Atlas API**

- First, we need to create an API key!

RIPE Atlas Home • About RIPE Atlas • Get Involved • Results • My Atlas: Christian Teuschel • Logout

You are here: Home > Data & Tools > RIPE Atlas

API Keys

[+ Create an API key](#)

Key	Created	Permission	From	Valid To	Enabled
<input type="checkbox"/> 7dccf3ea-bcd3-4f53-9fad-cd0dd43bdc6a	2014-10-29 15:31 UTC	Create a new measurement	2014-10-29 16:00 UTC	2014-11-30 16:25 UTC	✓

- ```
$ curl -H "Content-Type: application/json" -H "Accept: application/json" -X POST -d '{ "definitions": [{ "target": "ripe.net", "description": "My First Measurement", "type": "ping", "af": 4 }], "probes": [{ "requested": 10, "type": "area", "value": "UK" }] }' https://atlas.ripe.net/api/v1/measurement/?key=YOUR_API_KEY
```

# Network Monitoring

**RIPE**  
NCC

- **Network operators use tools for monitoring network health**
  - Nagios & Icinga
- **Tools receive input from RIPE Atlas via the API**
- **Benefits:**
  - pings from 500 out of 6000+ probes around the world
  - See your network from the outside
  - Plug into your existing practices

1. **Create a RIPE Atlas ping measurement**
2. **Go to “Status Checks” URL**
3. **Add your alerts in Icinga or Nagios**

- Status Checks work via RIPE Atlas' RESTful API
  - [https://atlas.ripe.net/api/v1/status-checks/MEASUREMENT\\_ID/](https://atlas.ripe.net/api/v1/status-checks/MEASUREMENT_ID/)
- You define the alert parameters, for example:
  - Threshold for the percentage of probes that successfully received a reply
  - How many of the most recent measurements to base it on
- What is the maximum packet loss acceptable
- <https://atlas.ripe.net/docs/status-checks/>

- **Community of operators contributed configuration code!**
  - Making use of the built-in “check\_http” plugin
- **GitHub repo examples:**
  - [https://github.com/RIPE-Atlas-Community/ripe-atlas-community-contrib/blob/master/scripts\\_for\\_nagios\\_icinga\\_alerts](https://github.com/RIPE-Atlas-Community/ripe-atlas-community-contrib/blob/master/scripts_for_nagios_icinga_alerts)
- **Post on Icinga blog:**
  - <https://www.icinga.org/2014/03/05/monitoring-ripe-atlas-status-with-icinga-2/>

## Exercise: Setting up Status Checks

- Set up and configure a Status Check
  - for an existing IPv6 ping msm to [www.google.com](http://www.google.com)
  - <https://atlas.ripe.net/api/v1/status-checks/1004005/>
- Configure the Status Check in such a way that you will trigger an alert for this measurement
- One possible solution:
  - Set the median RTT to a lower level:
  - [https://atlas.ripe.net/api/v1/status-checks/1004005/?median\\_rtt\\_threshold=10](https://atlas.ripe.net/api/v1/status-checks/1004005/?median_rtt_threshold=10)

## Advanced Topics

Success Stories

RIPE Atlas Anchors

RIPE Atlas Community

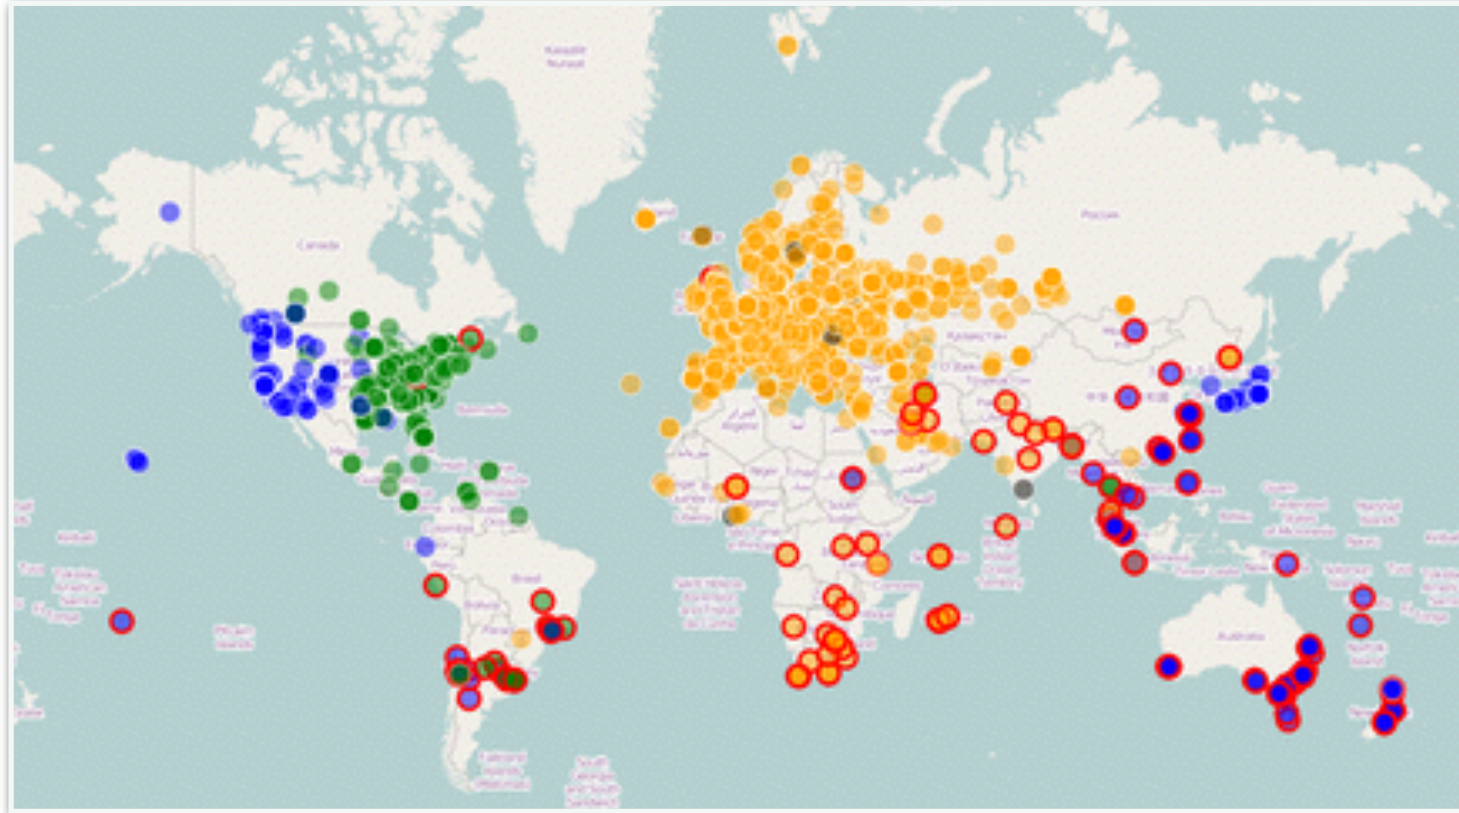

## **RIPE Atlas Success Stories**

---

[https://labs.ripe.net/  
atlas/user-experiences](https://labs.ripe.net/atlas/user-experiences)

- **How RIPE Atlas Helped Wikipedia Users**
  - <https://labs.ripe.net/Members/emileaben/how-ripe-atlas-helped-wikipedia-users>
- **How Fast the RIPE Atlas Anchor Has Paid Off**
  - [https://labs.ripe.net/Members/tim\\_kleefass/how-fast-the-ripe-atlas-anchor-has-paid-off](https://labs.ripe.net/Members/tim_kleefass/how-fast-the-ripe-atlas-anchor-has-paid-off)
- **Basic Evaluation of new IXP Peering Partners with RIPE Atlas and Zabbix**
  - [https://labs.ripe.net/Members/daniel\\_gomez/basic-evaluation-of-new-ixp-peering-partners-with-ripe-atlas-and-zabbix](https://labs.ripe.net/Members/daniel_gomez/basic-evaluation-of-new-ixp-peering-partners-with-ripe-atlas-and-zabbix)

- **Measuring the latency of sites for users worldwide**
  - Together, we identified ways to decrease latency and improve performance
- **Map code is available - please contribute to improve it!**
  - <https://github.com/RIPE-Atlas-Community/datacentre-latency-map>

- Investigating problems of slow servers:
  - <http://engineering.freeagent.com/2014/01/24/atlas-probes/>
- Measuring packet loss to determine congested networks, Jared Mauch, NTT
- Selective blackholing (examples based on RIPE Atlas)
  - <https://ripe68.ripe.net/presentations/176-RIPE68 JSnijders DDoS Damage Control.pdf>
- Anycast analysis:
  - [https://labs.ripe.net/Members/stephane\\_bortzmeyer/the-many-instances-of-the-root-name-server](https://labs.ripe.net/Members/stephane_bortzmeyer/the-many-instances-of-the-root-name-server)

# Global Reachability Measurements

- We test the reachability of the globally-defined v6DPs using **100 active probes** within the RIPE Atlas platform

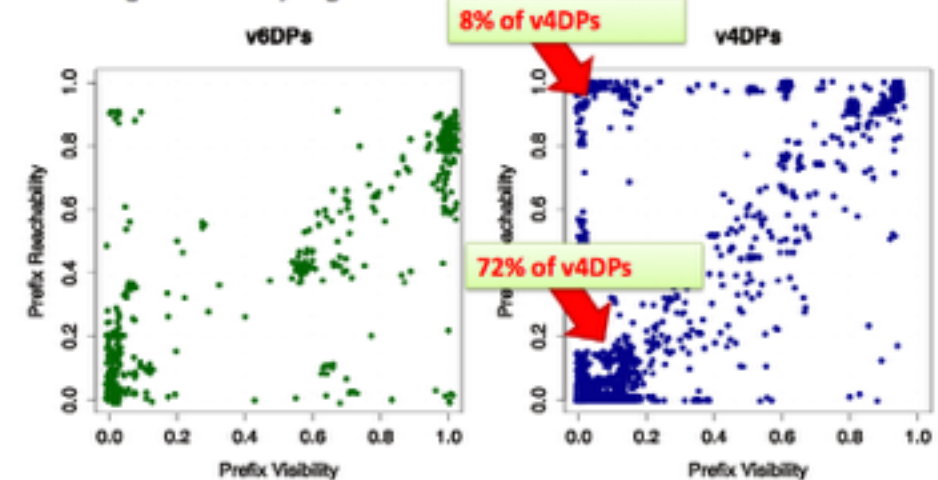

RIPE68@Warsaw

12

## Results

- Average reachability degree for a v6DP is of **46.5%**
- Average reachability degree for v4DPs is of **17.4%**

RIPE68@Warsaw

16

## Help us to help you!

- Go to **visibility.it.uc3m.es**
- Check if the prefixes of an AS are LVPs/DPs— monitor the global visibility of your prefixes!
- ... and tell us why the prefixes discovered have limited visibility in the first place: intended/unintended behaviour?

Query for ASN:  Get prefixes Please take the time to fill in the short survey form after visualizing the results of your query

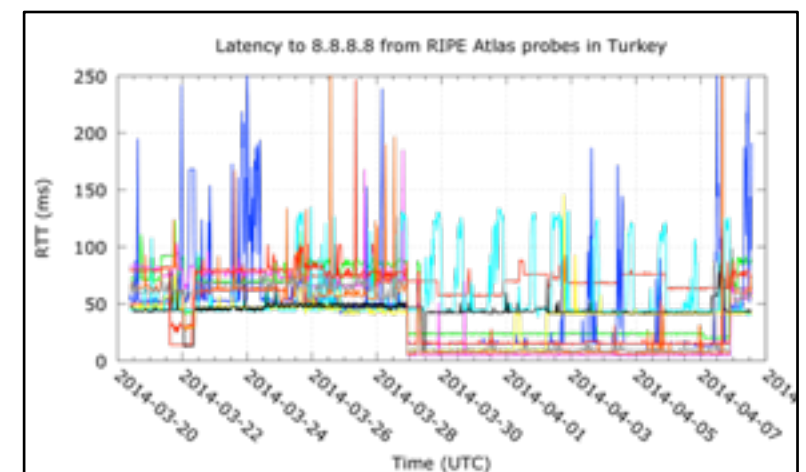

Fill in the AS number here

RIPE68@Warsaw

18

<https://ripe68.ripe.net/presentations/226-Understanding the Reachability of IPv6 Limited Visibility Prefixes.pdf>

- **IXP: Measuring the effect of installing L-root in Belgrade / SOX**
- **DNS: Looking for most popular instances of .FR anycast servers**
- **Events: Measuring Internet outages in Turkey and Sudan**

- **Using RIPE Atlas to perform worldwide traces to measure round-trip times and other route measurements**

- We identified routes that can be optimised and sent to other POPs with much better response times
- We also identified routes that can be optimised by changing the transit provider for the same POP

<https://labs.ripe.net/Members/becha/world-ipv6-launch-ripe-atlas-use-cases>

- **The success rate with IPv6-only domain names is much lower (~60%) than with "mixed" (both IPv4 and IPv6) domain names (~96%)**

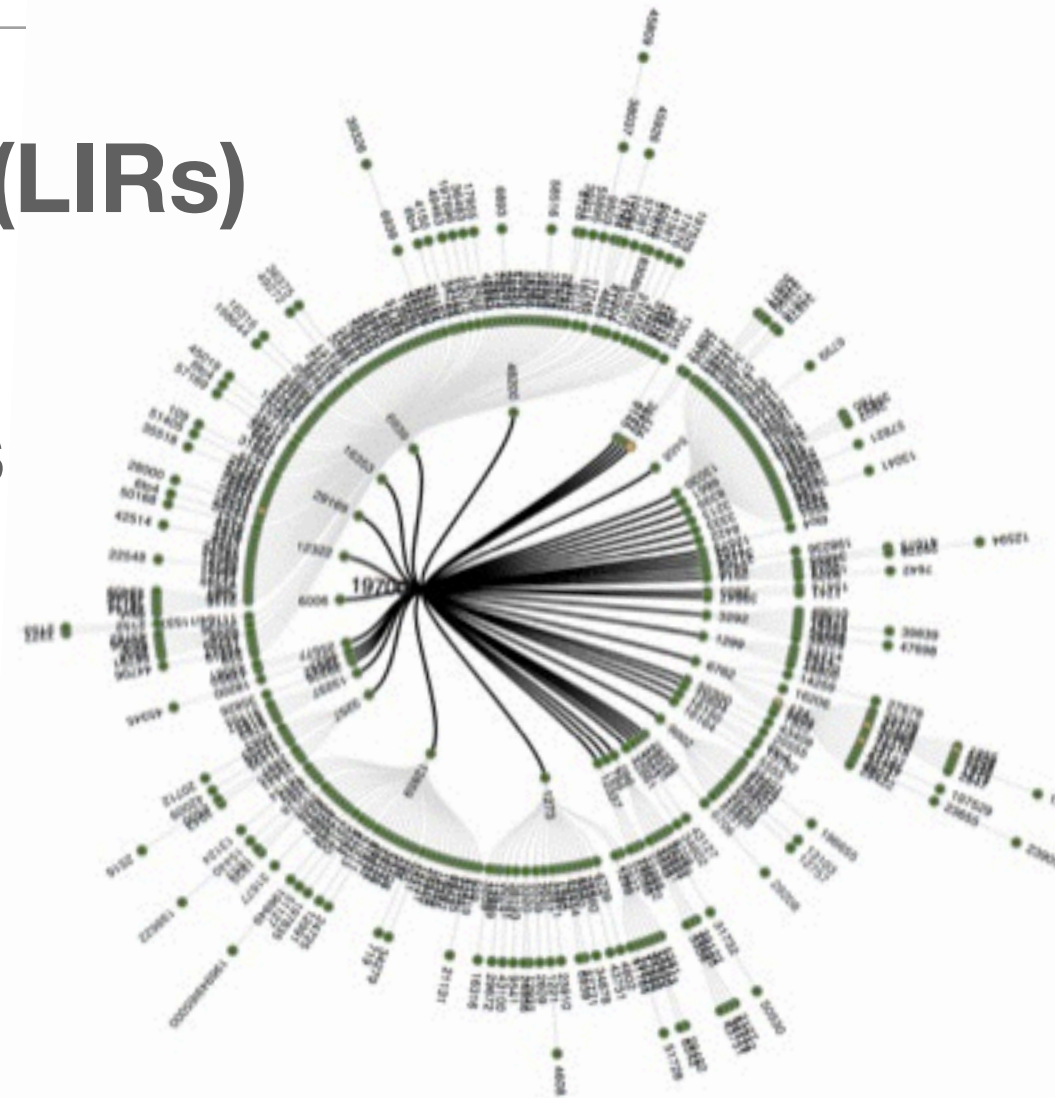

[https://labs.ripe.net/Members/stephane\\_bortzmeyer/how-many-ripe-atlas-probes-can-resolve-ipv6-only-domain-names](https://labs.ripe.net/Members/stephane_bortzmeyer/how-many-ripe-atlas-probes-can-resolve-ipv6-only-domain-names)

# IPv6 Reachability Testing

41

- Only for RIPE NCC members! (LIRs)
  - Via the LIR Portal
  - Using 1,000 RIPE Atlas probes
  - Visualising:
    - Completed paths
    - Unsuccessful paths
    - Clickable hops (ASNs)
- 
- <https://labs.ripe.net/Members/becha/test-your-ipv6-reachability-using-ripe-atlas>
  - <https://labs.ripe.net/Members/emileaben/visualise-your-ipv6-connectivity-using-ripe-atlas>

- “It is quite common in the IPv6 world to have devices that believe they are connected to the IPv6 Internet while they are not”

“When you use RIPE Atlas to measure the connectivity of an IPv6 device, 90% success is the maximal reachability you'll get.”

[https://labs.ripe.net/Members/stephane\\_bortzmeyer/how-many-atlas-probes-believe-they-have-ipv6-but-are-wrong](https://labs.ripe.net/Members/stephane_bortzmeyer/how-many-atlas-probes-believe-they-have-ipv6-but-are-wrong)

## RIPE Atlas Anchors

---

[https://atlas.ripe.net/  
about/anchors/](https://atlas.ripe.net/about/anchors/)

**RIPE**  
NCC

- **Anchors: well-known targets and powerful probes**
  - Regional baseline & “future history”
- **Anchoring measurements**
  - Measurements between anchors
  - 200 probes targeting each anchor with measurements
  - Each probe measures 4-5 anchors
- **Vantage points for new DNSMON service**
- **80 RIPE Atlas anchors**
  - Goal for 2014: 100 active anchors worldwide

- Benefits of hosting an anchor:  
<https://atlas.ripe.net/get-involved/become-an-anchor-host/>
- Apply for an anchor:  
<https://atlas.ripe.net/anchors/apply/>
- List and map:  
<https://atlas.ripe.net/anchors/list/>  
<https://atlas.ripe.net/anchors/map/>
- Organisations hosting an anchor:
- <https://atlas.ripe.net/get-involved/community/>

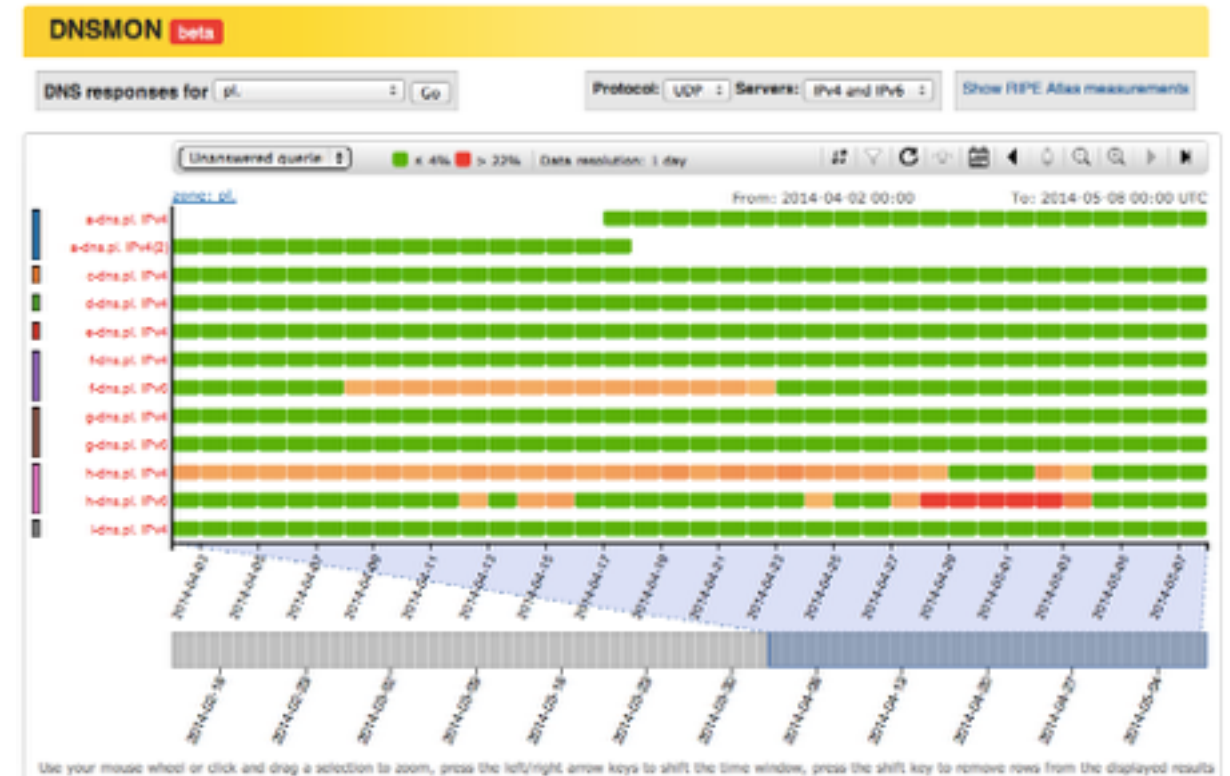

- Currently monitoring small selection of TLD zones
    - Root name servers & 30 ccTLDs & few gTLDs
    - New zones will be added later this year
  - On the roadmap: “domain checks”
- 
- <https://atlas.ripe.net/dnsmon>
  - [https://labs.ripe.net/Members/fatemah\\_mafi/an-updated-dns-monitoring-service](https://labs.ripe.net/Members/fatemah_mafi/an-updated-dns-monitoring-service)

- Exploring the potential of RIPE Atlas for mapping the packet layer topology

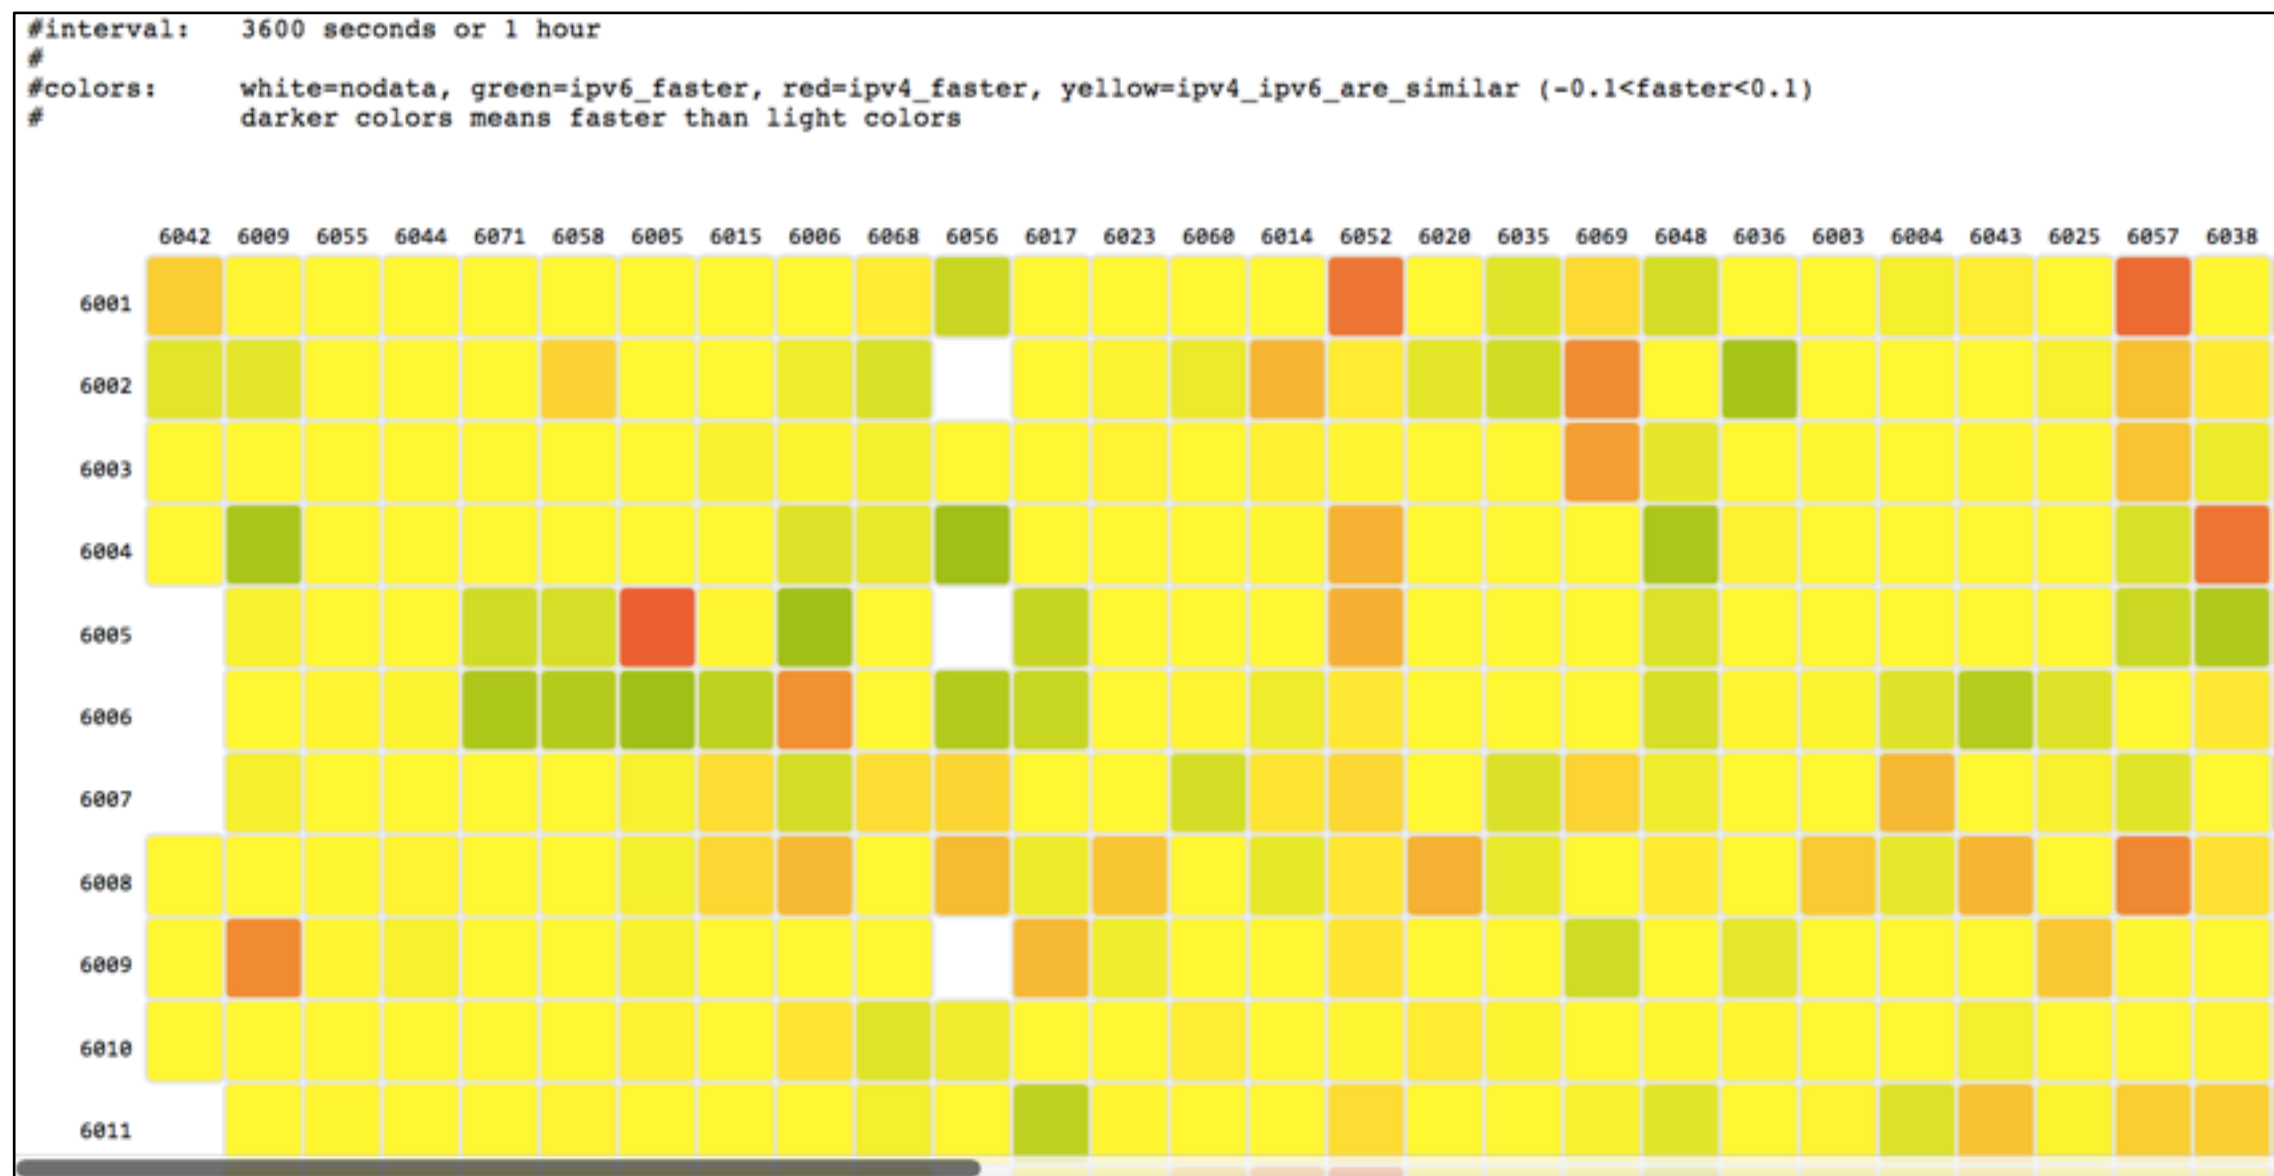

- Using the example of RIPE Atlas anchor at VIX (Vienna)

- Pretty graphs (using R), useful information

<https://labs.ripe.net/Members/dfk/map-a-ripe-atlas-anchor>

- In beta: Matrix view of anchors mesh
- Interactive, gives more details on click

# RIPE Atlas Community

---

- Programmers contribute analysis code:
  - <https://github.com/RIPE-Atlas-Community/>
- Code written by RIPE NCC:
  - <https://github.com/RIPE-Atlas-Community/RIPE-Atlas-data-analysis>
- Parsing library- “Sagan”:
  - <https://github.com/RIPE-NCC/ripe.atlas.sagan>
- Measurement source code available:
  - [https://labs.ripe.net/Members/philip\\_homburg/ripe-atlas-measurements-source-code](https://labs.ripe.net/Members/philip_homburg/ripe-atlas-measurements-source-code)

- Become an ambassador if you want to:
  - Help distribute probes outside the RIPE NCC service region
  - Give workshops, tutorials and promote RIPE Atlas
- To become an ambassador:
  - <https://atlas.ripe.net/get-involved/become-a-ripe-atlas-ambassador/>
  - Email [mcb@ripe.net](mailto:mcb@ripe.net) and we'll ship you some probes
- Change in distribution model:
  - [https://labs.ripe.net/Members/fatemah\\_mafi/changes-to-the-distribution-model-for-ripe-atlas-probes](https://labs.ripe.net/Members/fatemah_mafi/changes-to-the-distribution-model-for-ripe-atlas-probes)

- **Sponsor benefits:**

- Promotion on RIPE Atlas website
- Community recognition
- Double credits for every probe distributed

- **Becoming a sponsor:**

- <https://atlas.ripe.net/get-involved/become-a-sponsor/>

- **2014 sponsors:**

| Planned                                                                                                               | In Progress                                                                                                            |
